24. Bacterial membranes

By: Raykousheva, S.

Progress in the study of bacterial membranes from the development of the classical model by Singer and Nicholson (1972) is described. The model was confirmed by cryo-electron microscopy studies of Galik-Krzynichki et al. (1979). The function of bacterial membranes is considered in general and in relation to antibiotics.

### Indexing

**History, Education, and Documentation (Section 20-2)**

Section cross-reference(s): 3, 10

### Concepts

**Antibiotics**

bacterial membranes in relation to

**Bacteria**

membranes of, history of research on

**Cell membrane**

of bacteria, history of research on

**History**

of bacterial membrane research

### Supplementary Terms
