---

1. In March 2008, the survey was executed in the urban areas of Capital Federal, Gran Buenos Aires, Cordoba, Mendoza, and Rosario, representing 39 percent of Argentina’s population. In August 2008, the survey was executed in the urban areas of Capital Federal and Gran Buenos Aires, representing 35 percent of Argentina’s population.

2. In January 2008, the survey was a national probability sample of urban telephone households across China. A stratified PPS sample design was developed to sample 20 cities; urban households represent approximately 45 percent of the Chinese population. In August 2008, the survey was a probability sample of urban and rural households with land-line telephones in the provinces of Anhui, Hebei, Heilongjiang, Hubei, Jiangsu, Shanxi, Shanghai, Sichuan, and Yunnan—representing approximately 60 percent of the mainland Chinese population. The August sample was 40 percent rural, 60 percent urban (rural households make up approximately 55 percent of the population).

3. In Egypt, the survey was executed in the urban areas of Cairo, Alexandria, Giza, and Subra. These four urbanized areas represent 75 percent of Egypt’s urban population, which is 42 percent of the national population.

4. In India, a face-to-face survey was conducted in urban and rural areas in 14 of the largest Indian states; these states comprise 77 percent of India’s population. The sample is 60 percent urban, India’s population is approximately 30 percent urban.

5. In Indonesia, a national probability sample was conducted in both urban and rural areas and covering approximately 87 percent of Indonesia’s population.

6. In Mexico, a random telephone sample of adults who had landline telephones was conducted in all 31 states and the Federal District. Telephone penetration in Mexico is 55 percent.

7. In Nigeria, the sample was developed by selecting six states, one per geographic region, based upon their size and representativeness. Within each state, sampling points were selected by means of a multi-stage random sample which disproportionately sampled urban areas. The final sample is 75 percent urban; Nigeria is approximately 50 percent urban.

8. In the Palestinian Territories, a face-to-face national probability survey was conducted among the population of the West Bank, including East Jerusalem, and the Gaza Strip.

9. In Peru, the survey was executed in the metropolitan areas of Lima and Callao, representing 31 percent of the population.

10. In May 2008, the survey was conducted in 10 provinces of the country including Bangkok, Samutprakarn, Chantaburi, Ratchaburi, Chiang Mai, Kamphangpet, Kornkean, Sakonnakhon, Chumphon, and Songkla. In September 2008, the survey was conducted in 9 provinces of the country including Bangkok, Samutprakarn, Chantaburi, Khonkaen, Chiang Mai, Kamphaengphet, Sakonnakhon, Chumphon, and Songkhla.

11. In the United States, the poll was an online survey drawn from a nationally representative sample of the Knowledge Networks online panel. This panel is randomly selected through telephone interviews from the population of telephone households in the US, and subsequently provided with Internet access if needed.
