INTRODUCTION
Risk Management Changes in the 2014 Farm Bill

• Crop insurance program remains relatively unchanged in 2014 Farm Bill except for:
  • Conservation compliance for highly erodible lands and wetlands is now required when purchasing crop insurance.

• Failure to comply means being ineligible for any portion of the crop insurance policy premium that is paid by FCIC (ie you will pay for 100% of the premium).

• Shouldn’t be an issue here since Maryland requires conservation plans that are more stringent than USDA requires.
Risk Management Changes in the 2014 Farm Bill

- Additional Crop Insurance Changes for beginning farmers:
  - Exemption from cat and additional coverage policies fees;
  - Additional 10 percentage points of premium subsidy for additional coverage policies that have premium subsidy;
  - Use of the production history of farming operations that you were previously involved in the decision making or physical activities; and
  - An increase in the substitute Yield Adjustment, which allows you to replace a low yield due to an insured cause of loss, from 60 to 80 percent of the applicable transitional yield (T-Yield).
Risk Management Changes in the 2014 Farm Bill

• Currently no payment limitations in crop insurance program on either payouts on loses or government’s share of premium subsidy.
  • Was apart of debate on bill but excluded from final version.

• ARC and PLC do have payment limitations and AGI limits
  • Payments limited to $125,000 combined for ARC, PLC, and marketing assistance for an individual or a business entity.
  • NAP has separate $125,000 per entity payment limit.
  • Adjusted Gross Income (AGI) has to be under $900,000 to participate in ARC and PLC.
Risk Management Changes in the 2014 Farm Bill

- Non-Insured Crop Disaster Assistance Program (NAP) was changed in Farm Bill:
  - Now allowed to elect coverage at individual crop level at 50 to 65 percent in 5 percent increments at 100 percent of average market price.
  - Premium is 5.25 percent of liability
  - Waiver of service fee expanded from limited resource farmers to also include beginning farmers and socially disadvantaged farmers.
Crop Insurance Protection in Maryland

Why Maryland Crops Fail (2004-2013)
Maryland producers received $3 billion of protection and $198 million of indemnities since 2004.

- Drought, 72%
- Excess moisture, 10%
- Heat, 5%
- Price, 4%
- Wildlife, 3%
- All other, 4%
- Hail, 2%
Farm Safety Net Tools

- FSA will have new tools we have discussed:
  - ARC: ARC makes revenue-based payments on 85 percent of the covered commodity's base acres when actual county revenue or individual revenue is between 86 percent and 76 percent of the benchmark county or individual revenue.
  - PLC: Payment is available when market prices below references prices

- Both of these options are available at no cost to you.
Farm Safety Net Tools

- RMA will continue to offer crop insurance coverage at up to 75% of yield history (up to 85% for certain crops).
- FSA will continue to offer NAP – covers up to 65% of yield history.
How much of your risk is covered by ARC/PLC?

- **County ARC:**
  - Covered losses are 10% max. on 85% of Base Acres
  - Estimated coverage about 8.5% of producer’s expected revenue, if planted acres equal base acres
  - Payment made after end of market year

- **Maximum Safety Net Coverage with County ARC assumes base and planted acres are the same**
  - Maximum ARC 10% coverage (85% of base acres) not protection on additional planted acres
How much of your risk is covered by ARC/PLC?

- **County ARC:**
  - Covered losses are 10% max. on 85% of Base Acres
  - Estimated coverage about 8.5% of producer’s expected revenue, if planted acres equal base acres
  - Payment made after end of market year

Diagram: Safety Net Coverage with Crop Insurance and County ARC

- County ARC triggers at County level
- Assumes base and planted acres are the same

Legend:
- Green: 75% crop insurance protection
- Yellow: Maximum ARC 10% coverage (85% of base acres) no protection on additional planted acres
- Red: 15%
- Orange: 10%
- Red: deductible
How much of your risk is covered by ARC/PLC?

- **Individual ARC:**
  - Covered losses 10% max. on 65% of Base Acres
  - Includes Producer’s crops from anywhere in state
  - Estimate coverage about 6.5% of producer’s expected revenue if planted acres equal base acres
  - Payment made after end of market year

![Pie chart showing coverage](chart.png)

- **Maximum Safety Net Coverage with Individual ARC:**
  - Assumes base and planted acres are the same
  - 93.5% deductible
  - 6.5% Maximum ARC (10% coverage of 65% of base acres) not protection on additional planted acres
How much of your risk is covered by ARC/PLC?

- Individual ARC:
  - Covered losses 10% max. on 65% of Base Acres
  - Includes Producer’s crops from anywhere in state
  - Estimate coverage about 6.5% of producer’s expected revenue if planted acres equal base acres
  - Payment made after end of market year
Take away point – going to need more than just ARC protection

• Not going to be able to replace crop insurance coverage for ARC coverage

• If you take ARC and drop crop insurance coverage leaving over 90% of expected revenue uninsured

• Amount of uninsured revenue will increase if harvest price increases

• Finally, if have no base acres or plant in excess of base acres, then ARC coverage will be reduced because insurance will cover 100% of planted acres not just your base acres
Comparing County and Individual ARC with Crop Insurance vs NAP

<table>
<thead>
<tr>

Supplemental Coverage Option (SCO)

• New crop insurance product created in ‘14 Farm Bill
  • A county level revenue or yield based optional endorsement that covers a portion of losses not covered by the same crop’s underlying crop insurance policy.

• Indemnities will be payable once a 14 percent loss has occurred in the county, and individual payments will depend upon coverage levels selected by producers.
Supplemental Coverage Option (SCO)

- SCO is only available to producers who select PLC

- Not available to those that select ARC (County or Individual)

- Potentially only available in counties with Area Risk Protection Insurance (replaces old Group Risk Plan and Group Risk Income Plan)
  - Very few of those plans previously available in MD

- May not be available in MD, but will have to wait for regs from RMA
Price Loss Coverage (PLC) and Supplemental Coverage Option (SCO)

With Price Loss Coverage (PLC) producers to have Supplemental Coverage Option (SCO)

- 100% planted acres
- Provides Area Yield or Revenue protection (same as underlying crop ins.)
- Projected prices
- No payment cap
- Loss payment within 60 days of claims submission
- Premiums Subsidized a fixed 65%

What do you want YOUR Crop Insurance Based Risk Management Plan to do For YOU when disasters occur?

- Protect crop value $? A.
- Protect input cost $? A.
- Protection to secure operating loan (security) $?
- $$ To replace livestock feed $?
- $$ Buy-out preharvest sales contracts $?
- Strengthen the business plan and avoid an income interruption $?

At what percent of crop damage do you need a loss claim to trigger? ____%
Risk Management Check Up

Will YOUR 2015 Risk Management Plan be Adequate to Manage 2015 Risks?

(Increasing Input Costs, Prices & Weather Volatility)
