

His-tag Purification of PPTases

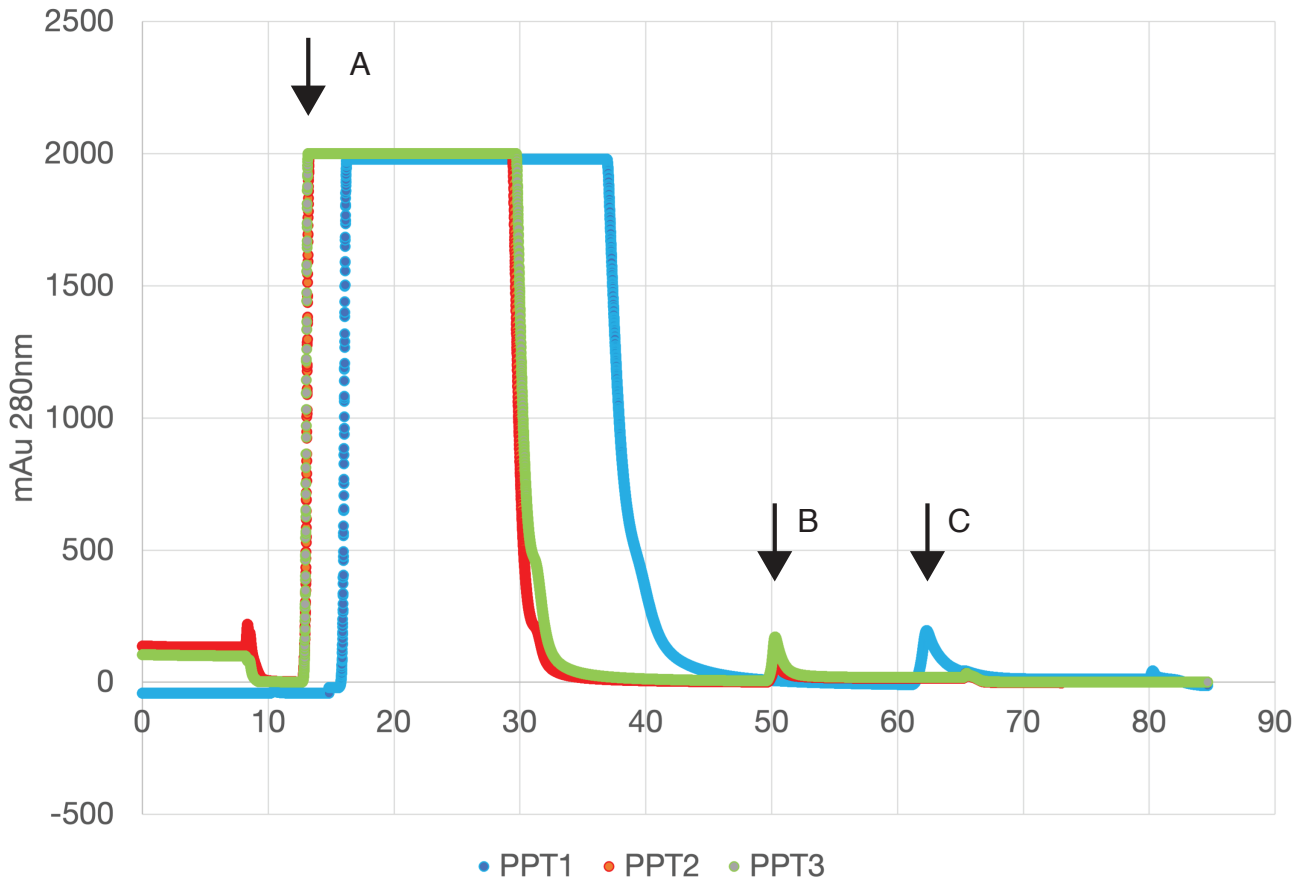

Figure S2-1: Chromatogram His-tag purification of phosphopantetheinyl transferases

The UV absorbance at 280 nm is shown on the Y-axis for the three *Amphidinium carterae* phosphopantetheinyl transferases (PPTases). The time in minutes is shown on the X-axis. Arrow “A” highlights the loading of the *E. coli* lysate while arrows “B” and “C” highlight the elutions of PPTase 2 and PPTase 3 followed by PPTase 1
