APPENDICES

Appendix A
Soil Descriptions

AREA 1

Unit 3 (N290 E203)

Level A was a rubble level, 10YR 3/1 very dark gray coarse sandy loam approximately 0.42 feet thick with inclusions of brick, mortar and rocks. Artifacts from this destruction related level were a mix of 19th and 20th century materials. Feature 16 was identified at the bottom of this level.

Levels B_1-B_2 were a 10YR 3/6 dark yellowish brown sandy silt loam
with inclusions of brick, mortar, charcoal and oyster shell. Total depth of this level was approximately 1 foot. Artifacts recovered from these levels were a mix of late 19th and early 20th century materials. Feature 17 was located within Level B.

Levels C_1-C_4 were a 10YR 3/6 dark yellow brown sandy clay loam approximately 1.7 feet thick. Few artifacts were recovered. A variety of 19th century material was collected from the first 2 arbitrary levels. No artifacts were found in the 2 lower levels.
Features 16 & 17 were most likely associated with one another. Feature 16 was a series of 8 bricks which were possibly articulated. Feature 17 was a mortared stone foundation directly beneath these bricks. This foundation was the corner the William Bellis dwelling which appeared on an 1878 Hopkins atlas.

Feature 20 was a 10YR 4/6 dark yellowish brown loam located in Level C_2. This was a feature of displaced soils and may possibly have been due to rodent activity. Fragments of coal, brick and mortar were collected.

Unit 4

Level A underlay the current asphalt parking surface which was removed by the backhoe. The soil removed was a 10YR 3/2 very dark gray sandy loam. Artifacts recovered from this area included whiteware, stoneware, redware, porcelain, bottle and window glass, pipe stem fragments, nails, brick, mortar and oyster shells.

Feature 13 was a line of bricks--a single course wide--cutting diagonally across the east and south wall of Unit 4. This brick was found just below the base of the asphalt bedding at an average elevation of 34.7 ft AMSL. This seems to be the insubstantial back edge of the Bellis Court Dwelling #s 5 and 6.

Feature 14 was a clear area of disturbance visible in the southeast corner of Unit 4. This disturbance can be attributed to the construction of the Courthouse Wing in the 1940s and impacts the southernmost end of Feature 13 (the Bellis Court Rowhouses).

Unit 5 (N260 E230)

Level A was a 10YR 3/2 very dark gray sandy loam located along the south and east walls of the unit. This level was actually a bit of soil remaining from Level A Unit 4. It was approximately 0.3 feet thick

at its deepest. Artifacts collected indicated that this was a level of 20th century fill.

Level B was a 10YR 3/4 dark yellowish brown coarse sandy loam 0.12 feet thick and was not present in the northern half of the unit due to Feature 15. Artifacts represented early 20th century fill material and included a high percentage of window glass, brick, mortar, porcelain, whiteware, and a pipe stem fragment.

Level C was a 10YR 4/6 dark yellow brown sandy clay loam with inclusions of brick fragments. This level actually had several different soil textures present throughout - a sandy clay loam in the southwest corner, a clayish sandy loam in the center and a clay along the east edge of the unit. Also, this level sloped considerably towards the south, a trait that continued to be present in the levels to follow. Approximate thickness of this was ranged from 0.5 to 0.9 feet. Artifacts included brick, mortar, oyster shell, porcelain, pearlware, stoneware, tin-glazed earthenware and pipe stem fragments. All of which indicated a mixed 18th and 19th century fill context.

Level D was a 10YR 4/2 dark grayish brown sandy loam with inclusions of mortar, coal and cinder. Thickness of this level ranged from 0.1 to 0.33 feet and continued to slope towards the south of the unit. Artifacts recovered from this level indicated a mid to late 19th century yard scatter associated with the William Bellis occupation. These artifacts included yellow ware, lead-glazed redware, whiteware, sponged ware, porcelain, slipware, thimbles, straight pins and buttons.

Level E was a 10YR 4/4 dark yellow brown sandy loam approximately 0.34 feet thick. Inclusions of mortar, brick, coal and oyster shell were present. This level was similar to the previous one save for a slight change in soil color and less artifacts present. The slope towards the south continued in this level. Artifacts included pipe stem/bowl fragments, hand-painted pearlware, sponged ware, straight pins and buttons which indicated a mid 19th century context.

Level F was a mottled level of sandy silt loam. Munsells included 5Y 4/4 olive, 10YR 3/4 dark yellow brown and 10YR 3/6 dark yellow brown. Inclusions of brick and mortar were present. Depth of this was approximately 1.03 feet. Artifacts included a wrought nail, pearlware, North Devon earthenware and pipe stem/bowl fragments, indicating a mix of 17th to 19th century materials.

Level G was present across the entire southern half of the unit. However, the westernmost third of the stratum was excavated first to help determine the sequence of levels. It was then decided to close Level G and treat the remaining soil as a feature (Feature 26). The soil removed as Level G was a 10YR 3/4 dark yellowish brown sandy loam approximately 0.71 feet thick. Artifacts included window glass, bottle glass, pipe stem/bowl fragments, pearlware and tin-glazed earthenware, indicating a mix of 18th and 19th century materials.

Levels H_1-H_2 were a sandy loam which began as a 7.5YR 5/6 strong brown and subtly changed to a 10YR 4/6 dark yellowish brown. This level ranged from 0.5 to 1.2 feet in thickness and also sloped considerably towards the south. Very few artifacts were present but the level seemed to date to the 19th century.

Level I was a 10YR 4/6 dark yellowish brown sandy loam located at the west wall of the unit south of Features 45 and 46 (post hole and mold). This level was not excavated.

Level J was a 10YR 4/4 dark yellowish brown sandy clay loam located east of Features 45 and 46. This level was not excavated.

Feature 15 was a concentration of oyster shells located at the surface of the unit. The soil surrounding the shells was a 10YR 4/6 dark yellowish brown very hard, compact silty sand with clay. Feature depth was approximately 0.1 feet.

Feature 26 was first excavated as Level G (see above). The soil was a 10YR 3/4 dark yellowish brown sandy loam mottled with 7.5YR 4/4 olive brown sandy loam. This feature was excavated in three arbitrary levels and represented fill or "slumping" above Feature 47 - a wood lined cellar. Total depth of the feature ranged from 1.0 to 1.85 feet. Artifacts included redware, creamware, pearlware, tin-glazed earthenware, borderware, pipe stem/bowl fragments, olive green bottle glass, window glass, nails and bone, and indicated a mix of 17th - 19th century materials.

Features 45 and 46 were a post hole and mold located near the north west corner of the unit just outside of the wood lined cellar. The soil of the post hole was a 7.5YR 4/6 strong brown sand while the post mold was a 10YR 4/4 dark yellowish brown sand. Thickness of the post mold feature was approximately 0.9 feet. No artifacts were recovered from either the post hole or mold.

Feature 47 was a wood lined, 18th century cellar. An auger hole was placed in this feature and recovered several artifacts, including a piece of creamware, pearlware, a brick fragment and a rouletted pipe bowl fragment. See Unit 29, Feature 47 for more detailed information regarding this cellar feature.

Unit 6 (N261.5 E237.3)

Level A was located on the eastern side of Feature 13 (see Unit 4 above and Unit 6 below) and was described as a 10YR 3/1 very dark gray with pockets of 10YR 4/3 brown dark/brown loamy sand. This level averaged nearly 0.5 ft thick.

Level B was located west of Feature 13 and was a 10YR 4/3 brown/dark brown sandy loam with brick, coal, and mortar inclusions. Level B was only 0.3 ft thick, but contained a mix of 19th and 20th century artifacts including a c. 1866 3 cent nickel.

Level C was excavated west of Feature 13 and below level B. Soils were a 10YR 3/4 dark yellowish brown sandy loam. Level was a 0.3 ft thick deposit of compact fill with yard scatter.

Level D was located east of Feature 13 and below level A. Soils were a 10YR 3/4 dark yellowish brown sandy loam with small bits of brick, coal, and shell. This level was very consistent with level E on the west side of the unit (see below). Level D was closed at an arbitrary level so as to remove Feature 13 and open a new level across the entire unit.

Level E was a 10YR 3/4 dark yellowish brown sandy loam with brick, coal, and shell inclusions. This level was very consistent with level D on the east side of the unit (see above). Level E was also closed at an arbitrary level so as to remove Feature 13 and open a new level across the entire unit.

Levels F_1 and F_2 were both 10YR 3/4 dark yellowish brown sandy loams. These levels measured about 0.9 ft thick and contained a mix of artifacts from the 17th and 18th centuries.

Levels G_1-G_3 were a 7.5YR 4/6 strong brown sandy loam. This level was excavated about 1.5 ft before ending excavations. No artifacts were found associated with levels G_2 and G_3. Level G was augured another 3 ft below the excavated surface with no artifacts or soil changes found.

Feature 13 was a line of bricks--a single course wide--cutting through the middle of the unit (actually unit was placed to straddle the feature). This brick was found just below the base of the asphalt bedding at an average elevation of 34.7 ft AMSL. This seems to be an insubstantial back edge of the Bellis Court Dwellings. Upon excavating around the brick it was found to be only 1 course (in places two) thick. This suggests that a grading probably occurred with the 1940s construction of the courthouse wing and that little is left of the Bellis Court occupation.

Feature 24 was a very shallow post hole found at the surface of level F. Measuring about 1 ft at its widest, this 10YR 3/6 dark yellowish brown stain was found directly below the area where Feature 13 had been found.

Feature 25 was a second post hole found at the surface of level G. This larger post hole measured nearly 1 ft across in all directions and was comprised of a 10YR 3/6 dark yellowish brown stain. Like feature 24, this post hole was also found directly below the area where Feature 13 had been located.

Unit 7 (N290 E206)

Level A was associated with the 1940s and later asphalt parking surfaces and included a heavy gravel bedding. Brick, wood, some glass and ceramics were recovered in the nearly 0.7 ft removed as level A.

Level B was a 10YR 4/4 dark yellowish brown sandy silt loam. Measuring 0.5 ft thick, this level was completely devoid of artifacts.

Level C was identified as a 10YR 4/6 dark yellowish brown sandy loam mottled with a 10YR 3/2 very dark grayish brown sandy silt loam. Nearly 0.6 ft thick this level also held no artifacts.

Level D was a 10YR 3/6 dark yellowish brown sandy clay. Excavated with the auger for an additional 2 ft, this probe turned up no artifacts and no further soil change.

Feature 17 (see Unit 3) was also present in Unit 7. Excavations of Feature 17 within unit 7 confirm the stone foundations found in unit 3 to be a corner. It location lines up with the location of the William Bellis dwelling indicated on the 1878 Hopkins map.

Feature 22 was a small pocket of a charred fibrous material. Described as a 7.5YR 2/0 black, this stain was found at the top of level B and cutting level C. No artifacts were recovered but a soil sample was taken.

Feature 23 was a post hole with obvious mold. The 0.8 ft wide hole was comprised of a 10YR 3/2 very dark grayish brown sandy silt loam and found within level B and cutting level C. The post was excavated to a depth of 0.6 ft.

Unit 18 (N255 E230)

Unit 18 was a 10'x 5' unit located directly south of unit 5 and was initially opened with the backhoe. A trench through the center of the unit was shoveled by hand and artifacts from this are provenienced as Unit 18, probe. Materials from this probe are related to levels A-C of Unit 26.

Level A was a 5YR 4/4 reddish brown clay loam. Level was first encountered 3 ft south of the N225 E230 coordinate. Leveling off a once steeper slope, level A measured 1.1 ft thick at the south wall of the unit.

Level B was a 7.5YR 3/2 dark brown sandy loam full of mid 19th century materials (level was a continuation of level __ found in Unit 5). Level was over a foot thick at the northern edge of the unit but fell off in a significant slope towards the south diving below level A.

Feature 76 was a post hole encountered in the east profile of unit 18. Described as a 5YR 2.5/1 black granular ash, this feature measured about 0.7 ft across. Feature was identified as cutting level B.

Unit 19 (N255 E226)

Level C was a 10YR 3/4 dark yellowish brown sandy loam with brick, mortar, and shell inclusions. Level C--located above Features 26 and 47--contained bone, nails, window and bottle glass, and ceramics dating to the mid-19th century.

Level D was described as a 5YR 4/6 yellowish red sandy silt located outside of the wood lined cellar (represented by Features 26 and 47). Level was not excavated until cellar was better defined and it was deemed prudent to excavate behind the wood lining of the cellar (Feature 47).

Feature 26a-c were several levels of deposition within the fill of an earthfast cellar. The levels within the feature each were distinct episodes of fill.

Feature 26a was described as a 10YR 3/3 dark brown sand. This deposit, excavated only in the easternmost portion of Unit 19, contained brick, nails, yellowware, annular decorated whitewares, mocha wares, bottle and window glass. This would be the latest deposit of fill above the cellar.

Feature 26b was a 10YR 4/3 brown clay loam. This deposit was found sandwiched between 26a and 26c and contained a mix of materials that included delftware, 17th century border ware, whiteware, tobacco pipe fragments, olive bottle glass, and a strait pin. Wood lining of cellar (Feature 47) was found at the base of 26b.

Feature 26c was a 10YR 4/4 dark yellowish brown sandy loam. This level, when removed, revealed a very undulating slope above the cellar lining. This suggests a slumping episode that probably post dated the cellars use.

Feature 47 was identified in Unit 19 as a 10YR 3/3 dark brown sandy loam, but little was done with the Feature in this unit. Part of approximately 2 inch thick wood lining was recovered.

Feature 89 was a post hole associated with the cellar. The feature was described as a 5YR 4/4 reddish

brown sandy silt stain measuring 1.2 ft north-south and 0.8 ft east-west. Similarly to Features 45 and 46 (from Unit 5), this post hole was located just outside of the wood lined cellar at an elevation of 30.9 ft AMSL and extended for only a few additional tenths.

Unit 20 (N260 E220)

Asphalt averaged a surface elevation of 35.8 ft AMSL and an approximate 0.2 ft thickness.

Level A was a heavy gravel bedding for the 1940s asphalt parking surface. This bedding ranged from 0.4 to 0.5 ft thick across the unit.

Level B was a 10YR 4/3 brown/dark brown loamy silt with shell inclusions. Level averaged 0.2 ft in thickness but wedged out toward the west.

Level C was a 7.5YR 2/0 black silt with heavy ash and coal inclusions. Level averaged 0.2 ft deep across the entire unit.

Level D was a 10YR 3/4 dark yellowish brown sandy loam found at the western corner of the unit. Nearly 1.5 ft was excavated before unit was completed.

Level E was identified as a 10YR 3/3 dark brown sandy loam. Level averaged about 0.4 ft thick.

Level F was a 7.5YR 4/0 dark gray ash level found near the eastern side of the unit and above level E. This level measured only 0.2 ft thick.

Level G was another 7.5YR 4/0 dark gray ash level found below level E. It also measured only a few tenths of a foot thick.

Level H was a 10YR 6/3 pale brown soil found above Feature 65 (the William Bellis cellar). Level measured only a few tenths of a foot thick.

Level I was another level of fill above Feature 65. It was described as a 10YR 4/2 dark grayish brown sandy clay. Level I proved only a thin level.

Level J was a 7.5YR 4/4 dark brown sandy clay soil found directly above Feature 65. Only 0.15 ft thick this soil was another fill deposit above the feature.

Feature 65 was a clear cellar hole filled with brick and mortar. Architectural materials filling the hole appear to date to 19th century. Artifacts recovered at the surface provide a late 19th century date (1880s) and are probably indication of the destruction of the building. All of this, with the documentary evidence available on Hopkins and Sanborn maps, suggest this building to be the William Bellis dwelling that was demolished by the 1890s to make room for the rowhouses that comprised Bellis Court. Cellar was described as a 10YR 5/3 brown soil with a 90% inclusion of brick chunk and mortar.

Features 67 and 68 were a post hole and associated post mold found at the edge of Feature 65. The post hole was described as a 10YR 3/4 dark yellowish brown circular stain approximately 2.5 ft across. The post mold was a 10YR 2/1 measuring nearly 0.8 ft wide.
Feature 69 was a soil stain found adjacent to Feature 65. Comprised of a light brown clay loam, Feature 69 appears to be slump around the edge of the cellar.

Feature 70 was a light gray ash and mortar fill found adjacent to Feature 65.

Unit 21

Unit 21 was an extension of the area opened as Unit 4. Excavation was done by the backhoe.

Feature 79 was a wood lined privy found in the south wall of Unit 21. The privy was clipped by the backhoe but artifacts that could be associated were maintained with a general Feature 79 provenience. The top of the feature was found at an approximate elevation of 34.5 ft AMSL.

Feature 79a1 was collected from the 3.5 ft profile exposed by the backhoe. Comprised of several distinct deposits of soils, coal ash and artifacts. No fecal soils were encountered. The privy seemed to have been abandoned, cleaned, an filled. Artifacts included late 19th- and turn of the 20th-century materials including several semi-automatic machine made bottles (TPQ=1900s).

Feature 79a2 was a continuation of the privy fill deposits described by Feature 79a1 (above). Feature 79a2, however, was excavated by hand and screened in its entirety. This deposition of fill was found extending to a depth of 30.6 ft AMSL. Materials recovered continued to provide a early 20th century date the fill episode and included several large springs.

Feature 79b was a 10YR 3/3 dark brown silty loam. This appeared to be an earlier deposit and may have contained some fecal soil. A nearly whole ironstone pitcher with an Edwin Bennett mark on the base was pulled along with additional bottles (including "WARRANTED" flasks and medicinal bottles), metal items (such as graniteware bowls) and fabric.

Unit 23 (N259 E226)

Level C (Levels A and B were removed by the backhoe) was a 7.5YR strong brown sandy loam. This unit was opened in the attempt to find another post hole associated with the cellar. Due to time constraints, this unit was not excavated stratigraphically and Level C therefore, represented all soil removed. Approximate total thickness was 2.5 feet. No post hole was located. However, artifacts included salt-glazed stoneware, whiteware, yellow ware, sponged ware and redware.

Feature 26 was the slump above the wood lined cellar. (see Unit 5)

Feature 81 was a 0.13 feet thick soil stain of 10YR 4/6 dark yellowish brown sandy loam. No artifacts were recovered.

Feature 82 was a 0.21 thick soil stain of 10YR 4/3 dark brown sandy loam. No artifacts were recovered.

Unit 26 (N255 E230)

Level A was a 10YR 3/3 dark brown sandy loam approximately 2.26 feet thick. It was located only in the south half of the unit and contained inclusions of brick, mortar and shell. The top half of the level also contained a large amount of brick rubble that was not present in the lower half of the stratum. This level was extremely rich in artifacts. Artifacts included transfer-printed whiteware, ironstone, yellow

ware, porcelain, bottle and window glass, buttons, nails, metal, teeth, fish scales and a tremendous amount of bones.

Level B was the opening level in the north half of this unit. It was a 10YR 4/4 dark yellowish brown loamy sand approximately 0.43 feet thick. This level was the same as Feature 26, the slump deposit above the cellar. Artifacts included pearlware, porcelain, incised stoneware, bones, nails, glass and metal.

Level C was a sandy clay loam mottled with 10YR 4/3 and 10YR 4/6 dark yellowish brown. Also present was a 2.5Y 4/3 olive brown loam which was more heavily concentrated in the west half of the unit. This level was approximately 0.26 feet thick. However, this level (as well as unit) was closed out when the trench box was put into place. A new unit was opened as Unit 29. Artifacts in Level C included pearlware, nails, pipe stem fragments, bones and glass. As with the above level, the soil was also the same as Feature 26 in Unit 5.

Unit 29 (N256 E230)

Feature 47_{a1} was a 10YR 3/6 dark yellowish brown loamy sand. This level represented the beginning of excavation into the cellar feature within the wood lining. This initial arbitrary level was excavated to a depth of approximately 1 foot. Artifacts included brick, mortar, bone, bottle and window glass, pearlware and tin-glazed earthenware.

Feature 47_{a2} also was a 10YR 3/6 dark yellowish brown loamy sand and was approximately 1 foot thick. Artifacts included Westerwald stoneware, olive green bottle glass, a rouletted terra cotta pipe bowl fragment and a piece of whiteware. This level was closed when a heavy orange mottling began and a few pieces of wood appeared. An auger hole was placed into this level at the south end of the trench box. At approximately 2.35 feet below the start of the auger hole, a rich black soil was encountered (see Feature 90).

Feature 47_{b} was scraped down before the removal of any soil due to the fact that the soil beneath the trench box was undercut in order to shift the box two feet deeper into the hole. This would eliminate any contamination from the above levels. The soil in this level was a 7.5YR 4/4 dark brown mottled with 10YR 4/4 dark yellowish brown sandy loam. Approximate thickness of this stratum ranged from 0.7 to 1.8 feet in southwest corner where the level sloped down significantly. Artifacts included nails, creamware, salt-glazed stoneware, tin-glazed earthenware, olive green bottle glass, glazed brick, mortar, bones and an 1827 large cent piece. Feature 90 was located within this level.

Feature 47_{c} was a 10YR 3/4 dark yellowish brown sandy loam approximately 0.3 feet thick. This level was located at the southernmost third of the unit. The only materials recovered were a nail fragment and oyster shell.

Feature 47_{d} was a 5Y 5/4 light olive brown clay located across the center of the unit. This level was not excavated.

Feature 47_{e} was a 2.5Y 3/2 very dark gray brown loamy clay located near the north end of the trench box. Artifacts recovered from this level were oyster shells and brick fragments. This level was only partially excavated.

Feature 47_{f} was located at the northern end of the trench box. It was a 7.5YR 4/6 strong brown sandy

loam with inclusions of oyster shell and mortar. This level was approximately 0.1 feet thick. The only materials collected were oyster shells, mortar, coal fragments and small fragments of unidentifiable nails.

Feature 86 located in the northwest corner of the unit outside of the trench box. It was the 10YR 3/3 dark brown sandy loam present directly north of the wood lining of the cellar feature. This area collapsed before elevations were obtained. However, several artifacts were collected - two base pieces of olive green bottle glass and a portion of a hand blown, true balaster stemware which dated from the early to middle 18th century.

Feature 90 was the wood beams and their associated decomposed wood (10YR 2/1 black) located in Feature 47_b. Many of these timbers were well preserved. Due to decomposition, several were irregularly shaped. Two of the beams had a nail found associated with them. Other artifacts associated with this feature were a piece of olive green bottle glass, a base fragment of tableware and a piece of North Devon Sgraffito slipware.

Unit 30 (N252 E221)

Feature 47 was a central feature in the placement of unit 31. The northwest corner of the wood lined cellar was located within unit 31. Wood lining was sufficiently intact so as to provide a significant wood sample.

Feature 91 was a soil stain located at the outside corner of the wood lining for Feature 47. Described as a 10YR 3/4 silt loam, this stain measured 1.5 ft north-south and 1 ft east-west. The stain is probably related to slumping around the corner of the cellar hole.

Feature 92 was a mottled soil stain described as a 2.5YR 4/3 reddish brown sandy loam. This pocket of soil, located east of Feature 91, quickly disappeared.

Feature 93 was a 0.2 ft area behind the wood lining for Feature 47. No diagnostics were found in this endeavor but it became clear that there was slumping behind the wood lining of the cellar. This suggests that a hole was cut, the wood lining put in place, and then the resulting gap backfilled.

Unit 31 (N243 E228)

Due to time constraints, this unit was excavated without regard to stratigraphy in an attempt to located the wood lining of the cellar at the southeast edge of the excavation area. A 0.9 foot section of the wood lining was indeed uncovered.

Trench 4 Southeast Wall Profile

Asphalt parking surface for this profile was found with an average elevation of 36.4 ft AMSL.

Level A was the heavy gravel/stone bedding associated with the 1940s parking surface. This level averaged about 0.6 ft thick across the length of the trench.

Level B was a deposit dominated by crushed brick and mortar. Measuring approximately 0.4 ft thick, level was described as a 10YR 5/3 brown. Level is associated with Feature 66 (see below).

Level C was a 10YR 3/4 dark yellowish brown very sandy loam. Found only in the eastern half of the trench, this level seems to have been cut by Feature 66.

Level D was a 7.5 YR 4/3 brown silty sand running across the length of the trench. This level appears to be the natural accumulated soils in this area.

Feature 66 was a large area of brick and mortar rubble visible in the south-east wall of the trench. Feature measured nearly 2 ft thick near the southern edge of the trench. The density of architectural debris suggest this to be a destruction episode probably related to the destruction of the William Bellis dwelling (see Feature 65 description in Unit 20 and Trench 4). This feature blends in with Level B (described above).

Feature 95 was an isolated pocket (within Level D) of a 7.5YR 4/3 brown sand with brick and mortar inclusions. Feature was located between 33.1 and 31.1 ft AMSL and measured 1.7 ft across.

Trench 4 Northeast Wall Profile

Asphalt parking surface for this profile was found with an average elevation of 35.8 ft AMSL.

Level A was the heavy gravel/stone bedding associated with the 1940s parking surface. This level averaged about 0.6 ft thick across the length of the trench.

Level B was a 7.5YR 2/0 black sandy loam. This level averaged about 0.3 ft thick and was found above Feature 65.

Level C was a 7.5YR 4/3 brown silty sand similar to Level D identified in southwest profile (see above). The top of this level was found at 34.9 ft AMSL and reached to the extent of excavations (29.9 ft AMSL). Feature 65 clearly cut into this natural level.

Feature 65 was clearly a cellar hole filled with destruction debris. Described as a 10YR 5/3 brown soil with as much as 90% inclusion of brick and mortar rubble, this filled cellar was first encountered at 34.7 ft AMSL and reached a depth of just over 3 feet. Artifacts recovered from the backhoe trench suggest a late 19th century date (1880s) and are probably indication of the destruction of the building. All of this, with the documentary evidence available on Hopkins and Sanborn maps, suggest this building to be the William Bellis dwelling that was demolished by the 1890s to make room for the rowhouses that comprised Bellis Court. Feature 65 was also visible in the north-west (the short) profile but not in the southwest. After locating one corner of Feature 65 in Unit 20, it became clear that excavations for Trench 4 clipped the corner of the building.

Trench 3 East Wall Profile

Asphalt was uniform across entire trench. Elevations were all around 38.0 ft AMSL.

Level A was a 10YR 4/1 dark gray silty sand with ca. 80% gravel inclusions. This was 0.7 ft thick level served as bedding for the above asphalt and held little to no cultural material.

Level B was a 5YR 4/4 reddish brown mottled with a 5YR 4/6 yellowish red course sand. This sand level averaged about 0.4 ft thick and served to level off the undulating surface below. This level also seems likely to relate to the asphalt parking surface above.

Level C was a 10YR 3/2 very dark grayish brown silty loam with large concrete forms, brick, mortar and ash inclusions. This level was nearly 2 ft thick and seemed to relate to the neighborhood's destruction. Concrete forms appeared out of place and askew.

Level D was a 7.5YR 4/6 strong brown sandy silt which appeared relatively clean. The trench was excavated to a depth exposing about 0.5 ft of this level. There is no indication that this is culturally sterile soils but trench was ended at 4.5 ft below the surface for safety reasons.

Trench 3 West Wall Profile

Asphalt was uniform across entire trench. Elevations were all around 38.0 ft AMSL.

Level A was a 10YR 4/1 dark gray silty sand with ca. 80% gravel inclusions. This was 0.7 ft thick level served as bedding for the above asphalt and held little to no cultural material.

Level B was a 5YR 4/4 reddish brown mottled with a 5YR 4/6 yellowish red level of course sand. Level was approximately 0.8 ft thick and is probably related to level C.

Level C was a 5YR 4/4 reddish brown mottled with a 5YR 4/6 yellowish red level of course sand. Level C averaged about 0.8 ft in thickness and is probably related to level B.

Level D was a 10YR 3/2 very dark grayish brown sandy loam with brick, mortar, and ash inclusions. Level was only 0.8 ft thick and was located above a large concrete form found in the south wall of the trench. Level appears similar to level E and is probably the result of building destruction in the mid 20th century.

Level E was a 10YR 3/3 dark brown silty loam with brick, mortar, ash and wood inclusions. This level appears to be related to level D, but is significantly thicker. Level E was at least 2 ft thick and reached the extent of the trench excavations. Level E appears to relate to destruction of building.

Level F was a 7.5YR 4/6 strong brown sandy silt with streaks of 10YR 3/2 very dark grayish brown. The soils comprising this level are relatively clean and appear similar to natural strata. Level F, however, cuts between levels B and C and levels D and E. Darker striations suggest a gradual accumulation, yet soil seems to intrude upon later accumulations.

Feature 21 was a series of articulated brick near the base of level E. The 1930 Sanborn Map suggests this trench may cut a small attached room or building. Feature 21 may be a partially intact portion of

this structure.

Trench 3 North Wall Profile

Asphalt was uniform across entire trench. Elevations were all around 38.0 ft AMSL.

Level A was a 10YR 4/1 dark gray silty sand with ca. 80% gravel inclusions. This was 0.7 ft thick level served as bedding for the above asphalt and held little to no cultural material.

Level B was a 5YR 4/4 reddish brown mottled with a 5YR 4/6 yellowish red course sand. Averaging between 0.3 ft and 0.5 ft thick, this level seems related to the asphalt surface above.

Level C was a 10YR 3/2 very dark grayish silty loam with brick, mortar, and ash inclusions. This thick layer seems related to the destruction of the neighborhood in the mid 20th century. Bricks appearing near the bottom of the level may be related to Feature 21, but are no longer articulated.

Level D was a 7.5YR 4/6 strong brown sandy silt. This level was relatively clean and has the appearance of natural soil accumulation. There is no indication that this is sterile. Trench was ended at 4.5 ft below the surface for safety reasons.

AREA 3

Trench 1 - North Wall Profile

Level A was the current asphalt parking lot approximately 0.4 feet thick.

Level B was a 0.5 foot gravel bedding associated with the asphalt.

Level C was a 2.5Y 3/2 dark olive brown sandy loam with brick, coal, mortar and shell inclusions. This level was approximately 0.9 feet thick.

Level D was a complex series of deposits approximately 1.1 feet thick. Munsells included 10YR 3/1 very dark gray, 10YR 3/2 very dark grayish brown with an oil/tar residue present, 10YR 2/1 black with inclusions of coal, 10YR 3/6 dark yellowish brown, 7.5YR 2/0 black with inclusions of woodchips and 2.5Y 2/0 black. This level was most likely associated with an earlier 20th century parking surface.

Level E was a 10YR 3/2 very dark grayish brown sandy silt loam approximately 0.5 feet thick.

Level F was a 10YR 4/4 dark yellowish brown silty sand loam approximately 1.8 feet thick. This level was continued into Window 1 in the northeast corner of the trench.

Trench 1 - South Wall Profile

Level A was the current asphalt parking lot and its associated gravel bedding. This level was approximately 0.8 feet thick.

Level B was a 10YR 8/4 very pale brown sand level approximately 0.4 feet thick. This deposit was associated with the asphalt parking lot.

Level C was a 10YR 3/4 dark yellowish brown sandy loam. At the eastern end of the trench this level was approximately 1.7 feet. However, at the western end, this level was only 0.5 feet.

Level D was actually a small deposit of bog iron located within Level C.

Level E was a 7.5YR 2/0 black, oily deposit with inclusions of woodchips and charcoal. This level was approximately 0.4 feet at the eastern end and 1.2 feet at the southern end. This level was possibly related to an earlier 20th century parking surface.

Level F was a 10YR 5/3 brown sandy clay loam mottled with a 5Y 3/2 dark olive. At the eastern end of the wall, this level was approximately 0.9 feet thick. It thinned to 0.3 in the centered and ended at the western end of the profile as 0.5 feet thick.

Level G was a very dark brown, 10YR 2/2, sandy silt loam with oyster shell inclusions. Thickness of this level was approximately 0.5 feet.

Level H was a silty sand loam, 10YR 4/4 dark yellowish brown in color. This level was approximately 1.6 feet thick and was the final level of the trench. This level was the same as Level F in the north wall of the trench.

Trench 1 - Window 1

Level F was continued another 0.6 feet in the northeast corner of the trench along the north wall. Artifacts recovered included kaolin pipe stem/bowl fragments, tin-glazed earthenware, white salt-glazed stoneware, bones, nails and glass.

Feature 2 was a soil stain located in the northeast corner of Window 1. It was not excavated.

Trench 2 - North Wall Profile

Level A was the current asphalt parking surface approximately 0.4 feet thick.

Level B was the gravel bedding associated with the parking lot. It was approximately 0.35 feet thick.

Level C was a deposit of 2.5Y 7/6 yellow sand associated with the asphalt parking lot.

Level D was a 10YR 4/3 dark yellowish brown loam. Total thickness of this level was approximately 2 feet.

Level E was an approximate 1 foot thick level of 10YR 3/4 dark yellowish brown loam. Two small pockets of 5Y 4/2 olive gray soil were located within this level.

Level F was the final level exposed in this trench. It was approximately 2 feet thick and was a 10YR 3/3 dark brown loam.

Trench 2 - South Wall Profile

Level A was the current asphalt parking surface which was approximately 0.2 feet thick in this area.

Level B was the associated gravel bedding, approximately 0.5 feet thick.

Level C was the level of 2.5Y 7/6 yellow sand associated with the parking surface.

Level D was a thick deposit of 2.5Y 3/3 dark olive brown loam. It was evenly deposited at an approximate depth of 2 feet.

Level E was a relatively thin level of 10YR 5/2 grayish brown sand and gravel. Thickness was approximately 0.2 feet.

Level F was a 2.5Y 2/0 black loam. It was just over a foot at the eastern edge of the wall and thinned to 0.8 feet at its western end.

Level G was a thick deposit of 10YR 3/6 loam approximately 2.6 feet. Several artifacts were collected from this level. They included 20th century bottle glass and whiteware. Feature 1 was located within this level.

Feature 1 was a possible post hole which originated in Level G and continued at least 2 feet to the bottom of the trench. Soil removed was a 2.5Y 3/3 dark olive brown with small pebble inclusions. Artifacts recovered included nails, glass and roofing slate.

Trench 2 - Window 2

Level G was continued into a 2' by 2' window placed against the south wall of Trench 2. However, this window was never excavated.

Trench 5 - North Wall Profile

Level A was the asphalt surface and the associated gravel bedding approximately 0.4 feet thick.

Level B was a 2.5Y 3/3 dark olive brown sandy clay loam approximately 0.4 feet thick.

Level C was a black ashy level, 7.5YR 2/0, with inclusions of coal. Its thickness was approximately 0.2 feet.

Level D was a sandy clay loam, 7.5YR 4/6 strong brown. This level was somewhat uneven and ranged in thickness from 0.1 to 0.4 feet.

Level E was a very dark brown loam, 10YR 2/2, with mortar and brick inclusions. This level was present only in the eastern half of the profile and was approximately 0.7 feet thick.

Level F was located in only the west half of the wall. This level was a mix of mortar and asphalt and was a 7.5YR 2/0 black sandy loam. It was approximately 0.35 feet thick.

Level G was a 2.5YR 3/3 dark olive brown loam located in the western half of the wall. It was approximately 0.3 feet thick. Most likely, this level, along with Levels E and F, was associated with the earlier 20th century parking surface.

Level H was a sandy clay loam approximately 0.6 feet thick which extended across the entire length of the profile. Munsell for this level was 7.5YR 4/6 strong brown.

Level I was an evenly deposited level of oyster shell in a 10YR 4/6 dark yellowish brown sandy loam. Approximate thickness of this level was 0.5 feet.

Level J was a thin level of 7.5YR 2/0 black loam located in the easternmost third of the wall. It was approximately 0.1 feet thick.

Level K was the remaining level of the wall. It was a 10YR 3/3 dark brown sandy clay loam approximately 4 feet thick.

AREA 4

Trench 6 - North Wall Profile

Level A was the current asphalt parking surface approximately 0.3 feet thick.

Level B was the gravel bedding associated with the asphalt. This level approximately 1.2 feet thick and was a 2.5Y 4/2 dark grayish brown loam.

Level C was a 10YR 3/4 dark yellowish brown deposit of sandy loam with inclusion of brick, wood and metal. Depth was approximately 0.8 feet.

Level D was a 10YR 3/2 very dark grayish brown sandy loam which contained inclusions of brick and oyster shell. It was roughly 0.7 feet thick and contained a possible post hole (Feature 97).

Level E was a 10YR 5/6 yellowish brown clayish loam approximately 1.5 feet thick.

Feature 97 was located in Level D and cut Level E. It was approximately 0.8 feet across and 1 foot deep. One brick was found within this feature.

Trench 6 - South Wall Profile

Level A was the current asphalt parking lot surface.

Level B was a deposit of gravel bedding associated with the parking surface. It was approximately 1.6 feet thick and was a 2.5Y 4/2 dark grayish brown sandy loam.

Level C was a relatively thin deposit, 0.4 feet thick, of 10YR 3/4 dark yellowish brown sandy loam with inclusions of wood and brick. This stratum lensed out at approximately 1 foot from the east end of the trench.

Level D was a 10YR 4/3 brown loam which ranged from approximately 0.3 feet to 0.8 feet in thickness. This level was not present in the north wall profile of the trench.

Level E was a 10YR 3/2 very dark yellowish brown loam approximately 0.8 feet thick. This deposit contained inclusions of oyster shell, coal and slag.

Level F was a 10YR 5/6 yellowish brown clayish loam approximately 1.2 feet thick.

Trench 8 - East Wall Profile

Level A was the current asphalt parking lot and its associated gravel bedding. The approximate depth of this of this level was 1 foot.

Level B was a 10YR 4/3 brown sandy loam with inclusions of brick fragments, coal and ash. Small pockets of clay, 10YR 3/4, were present. The level was approximately 0.3 feet thick and extended along

8 feet of the trench.

Level C was a level of 10YR 4/2 dark grayish brown loam approximately 0.2 feet thick. It was present at the northern end of the trench and was comprised mostly of shell and coal inclusions. This level was the same as Levels E, F and G.

Level D was a silty loam, 10YR 3/2 very dark grayish brown, with pockets of coal ash, wood, brick and mortar. It was approximately 0.5 feet in thickness and was comprised of several thin lenses of ash and soil deposits.

Level E was present at the southern end of the trench and was 0.1 feet thick. It was a 10YR 4/2 dark grayish brown loam with inclusions of shell and coal. This level was the same as Levels C, F and G.

Level F was located at the northern end of the trench and was approximately 0.2 feet thick. The soil and inclusions were the same as in Levels C, E and G.

Level G was approximately 0.2 feet thick and extended along 3/4 of the profile. It appeared to be a continuation of Level F that had been interrupted by Feature 29.

Level H was a very compact level of 10YR 4/4 dark yellowish brown sandy silt. It was approximately 0.4 feet thick.

Level I was a very hard packed level of 10YR 3/2 very dark grayish brown sandy loam containing building rubble. This level was approximately 0.7 feet thick.

Level J was approximately 1.5 feet in thickness. It was a 10YR 4/4 dark yellowish brown sandy loam.

Feature 29 was a post hole which contained a small fragment of wood.

Trench 8 - West Wall Profile

Level A was the current asphalt parking lot and its associated gravel bedding. It was approximately 1.2 feet thick.

Level B was a thin level of 10YR 4/4 dark yellowish brown sandy loam present only in the northernmost third of the profile. It was approximately 0.15 feet thick.

Level C was approximately 1.4 feet thick. This level was a 10YR 3/2 very dark grayish brown sandy loam with inclusions of oyster shell, coal, slag, wood and brick.

Level D was approximately 2 feet in thickness. It was a 10YR 4/4
dark yellowish brown sandy loam.

Trench 8 - South Wall Profile

Level A was the current asphalt parking lot and part of its associated gravel bedding. It was approximately 0.6 feet thick.

Level B was a thin stratum of 10YR 4/2 dark grayish brown sandy loam less than 0.1 feet thick. It was present in the middle of the gravel bedding put down for the asphalt.

Level C was the continuation of the gravel bedding. It was approximately 0.6 feet in thickness.

Level D was approximately 0.2 feet in the eastern half of the profile and 0.7 feet in the western half. It was a 10YR 3/3 dark brown loam with inclusions of coal.

Level E was a thin deposit of ash which was present only in the eastern half of the profile. It was 7.5YR 5/2 brown and approximately 0.25 feet thick.

Level F was a 10YR 4/6 dark yellowish brown silty loam. As with the level above, it was only present in the eastern half of the profile. It was approximately 0.3 feet thick.

Level G extended along the entire wall of the trench. It was a 10YR 3/3 dark brown loam with inclusions of coal and mortar. In the western half of the trench, this level blended up into Level C. It was approximately 0.9 feet thick with fewer inclusions in the lower 0.4 feet.

Level H was approximately 1.3 feet thick. This level was 10YR 4/3 brown in color and was of a sandy loam texture.

Unit 9 (N E)

Level A underlay the asphalt and gravel bedding that was removed by the backhoe. This level was a 10YR 3/2 dark gray brown sandy loam with brick and mortar inclusions. It was approximately 1.53 feet thick. The soil from this level was not screened. However, artifacts were collected and were a mix of 20th century materials.

Unit 10 (N102 E227)

Level A was not present - removed by backhoe.

Levels B_1-B_3 were approximately 1.5 feet total in thickness. It was a level of 10YR 3/2 dark grayish brown sandy loam with pockets of 10YR 4/3 brown ash. Inclusions of coal and cinder were present. Artifacts were a mix of mid-20th century materials and included glass, ironstone, yellow ware, pipe stem fragments, porcelain doll parts, buttons, bones, a 1940 dime and nylon back seamed stockings.

Level C_1 was approximately 0.5 feet thick. All C levels were a 10YR 3/4 dark yellowish brown sandy loam with inclusions of oyster shell, coal, brick and mortar. Artifacts in this arbitrary level included bone, nails, bottle and window glass, porcelain, rockingham and yellow ware.

Level C_2 was approximately 0.5 feet thick. Artifacts represented the 19th century - pearlware, whiteware, tin-glazed earthenware and bottle glass.

Levels C_3-C_6 were approximately 1.5 total in thickness. Artifacts were a mix of 18th century along with some 17th century materials. Recovered materials included pipe stem/bowl fragments, olive green bottle glass, salt-glazed stoneware and North Devon earthenware.

Level D was approximately 0.5 feet thick. It was a 7.5YR 4/4 dark brown sandy loam. Very few artifacts were recovered form this level - nails, brick and slag.

Level E was approximately 0.4 feet thick and was a 2.5Y 4/4 olive brown sandy clay. No artifacts were recovered.

Feature 33 was a small pocket of 7.5YR 4/6 strong brown sand located in Level B within the northwest corner of the unit. No artifacts were present within the feature.

Feature 34 was a 20th century terra cotta sewer pipe located in Level B in the northeast corner of the unit. Sanborn insurance maps indicate that water came to Cathedral Street by 1903.

Feature 38 was the pipe trench associated with Feature 34.

Feature 54 was a circular patch of 10YR 3/4 dark yellowish brown sand located within the northwest area of the unit in Level D. No Artifacts were found.

Feature 55 was a triangular patch of sand (same as Feature 54) located in the southwest corner in Level D. One piece of olive green bottle glass was recovered.

Unit 14 (N122 E246)

Level A was a 10YR dark brown sandy loam mottled with a 10YR 34/ dark yellowish brown loamy clay. Inclusions of coal, brick and ash were present. This 20th century destruction level was 0.3 feet thick.

Level B was a very dark grayish brown silty loam that was approximately 0.7 feet thick. Pockets of coal, ash, wood, brick and mortar were present. Artifacts recovered were 20th century.

Level C was a very compact 10YR 4/4 dark yellowish brown sandy silt. It was a relatively clean fill deposit which lensed out towards the west. Depth of this level ranged from 0.4 feet to 0.2 feet. Only nails, brick, coal and shell were recovered.

Level D was a dark brown sandy loam, 10YR 4/3. The level was hard packed and contained brick rubble. Artifacts collected were late 19th century.

Unit 15 (N98 E225)

Level B was a very dark grayish brown sandy loam, 10YR 3/2 with inclusions of coal and ash. Approximate depth of this level was 0.6 feet. Twentieth-century artifacts were recovered.

Level C_1 was a 10YR 3/3 dark brown sandy loam with inclusions of brick, coal and oyster shell. As an arbitrary level, its depth was approximately 0.5 feet. Artifacts were a yard scatter of late 19th century materials including pearlware, rockingham, pipe stem/bowl fragments and a metal buckle.

Levels C_2-C_4 were a 10YR 3/4 dark yellowish brown very sandy loam. Total thickness of these arbitrary levels was approximately 1.6 feet. Artifacts were a mix a 18th and 17th century materials including metal slag, pearlware, North Devon gravel tempered earthenware, salt-glazed stoneware and Iberian

earthenware.

Level D_1 was a 10YR 3/4 dark yellowish brown sandy loam but with a much higher percentage of slag present than in Level C. Features 73, 74 and 75 first appeared in this arbitrary level. Artifacts found were from both the late 17th and early 18th centuries.

Level D_2 was similar to D_1 except for a slight change in soil color. This level was a 7.5YR 4/4 dark brown sandy loam. Artifacts were similar to the previous level.

Level D_3 was a dark yellowish brown sandy loam, 10YR 4/6. Late seventeenth/early eighteenth century material were recovered from this arbitrary level. Artifacts included iron slag, olive green onion bottle bases, tin-glazed earthenware and Dutch yellow bricks.

Level E was a 5YR 4/6 yellowish red sandy loam that was not excavated due to the total depth of the unit form the surface.

Feature 60 was located in the northwest corner of the unit in Levels B and C. It was bowl shaped deposit of mortar filled with a 10YR 3/2 soil. This feature was also present in the southwest corner of Unit 10, but was not indicated as a feature there.

Feature 64 was first thought to be a concentration of articulated bricks surrounded by a 10YR 4/2 soil in Level C. However, this feature proved to be a post hole containing brick rubble.

Feature 73 was a large slag deposit encountered in Level D_1 extending 3/4 of the way across the unit from the east wall. This deposit became progressively thicker from its west edge to the east wall of the unit. Artifacts associated with this feature included kaolin pipe stem fragments and gray salt-glazed stoneware.

Feature 74 was a small slag deposit against the north wall of the unit. No artifacts were recovered in association with this feature.

Feature 75 was another small deposit of slag located in the northwest corner of the unit, extending from the west wall. One piece of Fulham stoneware was found directly beneath this deposit.

Unit 22 (N99 E217)

Feature 78 was a barrel privy located in the northwest corner of the unit. The eastern half of the abandoned privy has been disturbed by the backhoe.

Level a was a 2.5YR 4/3 dark olive brown sandy loam which appeared to have been used to fill the void of the privy when it was abandoned. This level was approximately 0.7 feet deep. Few artifacts were recovered from this soil.

Level b was a 10YR 3/6 dark yellowish brown organic loam. This level located at the base of the feature and along the sides. Artifact concentration was much higher than the previous stratum. This level was most likely related to privy use.

Feature 87 was a single course brick pad located at the south edge of the unit. It was approximately 5 feet wide and extended to the south beneath the asphalt. Although it was apparent that this feature was a continuous brick pad, only 7 of the bricks were articulated.

Feature 88 was a single course brick pad located at the north edge of Unit 22. It was obvious that this feature was connected to Feature 87. Nine of the bricks were articulated and continued beneath the layer of asphalt as in Feature 87. It appeared that this feature was associated with the mortar "bowl" (Feature 60) in Unit 15.

Unit 24 (N95 E220)

Levels A_1-A_2 of this unit were the same level as D in Unit 15 which adjoined this unit along the east wall. The soil was a 7.5YR 4/4 dark brown sandy loam with inclusions of brick fragments and slag. This level sloped drastically towards the northeast corner of the unit and ranged in depth from 0.8 to 2 feet. No materials other than brick and slag were encountered.

Level B was not excavated. The soil was a 10YR 4/4 dark yellowish brown sandy loam with pebble inclusions.

Unit 25 (N93 E229)

Level A was an undulating level of 10YR 4/4 dark yellowish brown sandy loam ranging from depths of 0.4 to 1.8 feet. Slag was the only material recovered.

Levels B_1-B_2 were a 7.5YR 4/6 strong brown sandy loam with rock inclusions. Depths ranged from 0.1 to 1.1 feet. No artifacts were collected.

Level C was not excavated. The soil was a 10YR 4/3 dark brown clay loam.

Feature 80 was a 7.5YR 4/4 dark brown sandy loam stain in the northwest corner of the unit. This feature appeared to continue into Unit 15 Level D. No artifacts were recovered.

Unit 27 (N95 E229)

Levels A_1-A_2 were a dark brown yellowish sandy loam, 10YR 4/4, excavated to a depth of approximately 2.5 feet. Artifacts were few and included brick fragments, slag, charcoal and glass.

Feature 83 was a post mold present in the first arbitrary level of A located in the southeast corner of the unit. Soil was a 10YR 3/2 very dark grayish brown loamy ash. The feature was relatively shallow, 0.02 feet. One piece of bottle glass was recovered from this feature.

Feature 84 was the post hole associated with Feature 83. The soil was a 5YR 3/2 dark reddish brown sandy loam. Total depth of the feature was approximately 0.4 feet. Artifacts included glass, charcoal, brick and iron.

Feature 73 was a slag deposit which continued from Unit 15. It extended approximately 1.7 feet from the east wall of the unit.

Unit 28 (N93 E225)

Level A was an approximate 0.48 feet thick level of 7.5YR 4/4 dark brown sandy loam a as was found in Unit 24 Level A. As in the surrounding units, the levels in Unit 28 revealed an undulating topography.

Level B was a 10YR 4/4 dark yellowish brown sandy loam with pebble inclusions. Excavated to a depth of only 0.02 feet.

Level C was also a 10YR 4/4 dark yellowish brown soil. It was, however, more of a clay loam than Level B. This level was not excavated.

Feature 85 was a post hole located in the northeast corner of the unit. Soil of the feature was a 10YR 3/2 dark grayish brown sandy loam and total depth was approximately 0.4 feet. No artifacts were recovered.

AREA 5

Unit 8 (30'x 30' Square)

Asphalt sloped from west to east across area of unit. The uphill west side averaged 28.2 ft AMSL, while the east side averaged 26.5 ft AMSL creating a current grade of about 5%. The lowest point, the southeast corner of the unit measured 25.96 ft AMSL.

Level A was the gravel bedding for the asphalt and dates to the placement of the 20th century parking lot.

Level B was a 10YR 5/6 yellowish brown sand found along the southern edge of the unit. At its deepest this sand bed measured about 0.4 ft thick. Deposit dates with parking lot.

Unit 11 (N105 E280)

Unit was located within the 30'x 30' area opened as Unit 8. The asphalt and the associated bed, therefore were removed prior to beginning excavations on this unit.

Levels A_1 and A_2 were comprised of a 10YR 4/4 dark yellowish brown sandy silt loam flecked with fragments of brick and charcoal. This deposit, averaging 0.4 ft thick, was related to the destruction of the 20th century neighborhood. Artifacts date to 20th century including a 1952 wheatback penny.

Levels B_{1-3} were a 10YR 3/3 dark brown sandy silt loam with brick and coal ash inclusions. Level B measured between 1.0 and 1.4 ft thick and seems to have accumulated over the late 19th and early 20th centuries. Artifacts included porcelain doll parts, strapped flasks, ironstone and other whitewares.

Level C was a 10YR 4/3 brown/dark brown sandy clay loam with brick, coal and ash inclusions. This level measured 1.2 ft thick on the west wall of the unit and only 0.6 ft along the east. Artifacts suggest a late 19th century context.

Level D_1 and D_2 were a 10YR 5/4 yellowish brown sandy loam with few brick inclusions. Level averaged about 1.3 ft thick and contained a mix of artifacts from the 18th through 19th century including kaolin pipe stem fragments, whiteware, and combed slipware.

Level D_2-E Mix was a 7.5YR 4/4 dark brown sandy loam. This transitional level was approximately 0.8 ft thick and was present only in the southern half of the unit. Very few artifacts were recovered.

Level E was a 7.5YR 4/4 dark brown silty sand flecked with ash and charcoal deposits. Unit was ended after completing one arbitrary. Artifacts were sparse and appeared to date to the 18th century.

Feature 35 was a gravel inclusion first found within level A but cutting through levels B and C. This clearly formed an I shaped hole that had the same appearance of the I-beam supports for the guardrails surrounding the current parking area. There was no evidence of the beam itself only the mold left after its removal.

Feature 40 was a post hole first identified within level B_3 and associated with Feature 35. Soils removed were a 10YR 3/6 dark yellowish brown sandy loam.

Feature 61 was a dark yellowish brown 10YR 4/4 soil stain encountered in Level E. Total depth of this feature was 0.4 ft. A single nail, a shell and a piece of glass were recovered.

Feature 62 was also a dark yellowish brown 10YR 4/4 soil stain encountered in Level E. Its depth was 0.18 ft.

Feature 63 was a 7.5YR 4/4 dark brown shale and oyster shell anomaly. Total depth of the feature was 0.39 feet.

Unit 12 (N120 E280)

Unit was located within the 30'x 30' area opened as Unit 8. The asphalt and the associated bed, therefore were removed prior to beginning excavations on this unit.

Level A was a 7.5YR 4/4 dark brown sandy loam with charcoal, brick and slag inclusions. Measuring about 0.45 ft thick, level A held artifacts dating from the 20th century (including a political campaign button) and is probably related to the neighborhood destruction.

Level B averaged about 1 ft thick and was comprised of a 10YR 4/3 dark brown sandy loam with brick and oyster inclusions. Level contained early 20th century artifacts including marbles, bottles, buttons, and transfer printed whiteware.

Level C was characterized by root disturbance located in the western half of the unit. As a result level C was located adjacent to level D and above level E. Level C soils were identified as 10YR 4/3 dark brown loam with coal, brick, and shell inclusions. Less than 0.2 ft thick, this level dates to around the turn of the 20th century.

Level D was found adjacent to level C and above level E. Soils were a 10YR 4/3 dark brown loam with less root disturbance than found in level C. This level was also excavated as less than 0.2 ft thick and dates to the early 20th century.

Level E_1-E_4 was a 10YR 4/4 dark yellowish brown clay loam with few brick and coal inclusions. All four arbitrary levels excavated within level E measured 1.6 ft thick. Artifacts from levels E_1 and E_2 suggest a mixed 19th century context. Artifacts from levels E_3 and E_4 provide a mix of 18th and 19th century materials.

Level F was a 5YR 4/4 reddish brown sandy loam. This level averaged 0.65 ft thick and contained artifacts dating to the 18th century. A sherd of North Devon Gravel Tempered ware suggest this may be an early context.

Level G was nearly 1 ft thick and was comprised of a 7.5YR 3/3 dark brown sandy loam. Few artifacts were found near the surface of this level but no clear diagnostics were identified. This level probably dates to the late 17th and early 18th century occupation of the site.

Level H was a 5YR 4/6 hard packed clay loam. The level was only a few tenths of a foot thick and did

not contain artifacts.

Feature 36 was a pocket of ash found within level A. The ashy soil was described as a 7.5YR 5/0 gray mixed with a 7.5YR 5/2 brown clay loam. The feature proved fairly shallow being only about 0.3 ft deep.

Feature 37 was a soil stain found in the northwest corner of the unit. Like feature 36, the soil was described as a 7.5YR 5/0 gray mixed with a 7.5YR 5/2 brown clay loam. The feature seemed to blend into level B and was not noted thereafter.

Feature 39 was a thin lens of ash and coal found at the surface of level B. Described as a 7.5YR 5/3 brown soil with shell, coal and brick inclusions, this feature held no diagnostic artifacts.

Feature 41 was a small post hole first identified at the surface of level E. Nearly a half a foot deep, the soils were a 10YR 3/3 dark brown sandy loam and bottomed out on a large pebble.

Feature 42 was a small three inch wide round stain found at the surface of level E. The soil was a 10YR 3/3 dark brown sandy loam about 0.8 ft deep. This stain was later defined as a post mold upon defining the related hole (see Feature 50 below).

Feature 43 was a roughly square area (measuring 0.5 to 0.6 ft wide) of loose sandy loam. This was a noticeable looser soil than that found in surrounding level E. It proved very shallow--only about 0.1 ft thick--and contained no artifacts.

Feature 48 and 49 were a post mold and related post hole found within level E. It was first identified at 24.2 ft AMSL and was about 0.4 ft deep. The post mold was identified as a 10YR 3/3 dark brown sandy loam while the post hole was a 10YR 3/4 dark yellowish brown sandy loam.

Feature 50 was a post hole for Feature 42 (see above). The hole was a 10YR 3/4 dark yellowish brown sandy loam containing no artifacts.

Unit 13 (N115 E270)

Unit was located within the 30'x 30' area opened as Unit 8. The asphalt and the associated bed, therefore were removed prior to beginning excavations on this unit.

Level A_1 was a 0.5 ft arbitrary within level A. Soils were described as a 10YR 3/3 dark brown sandy loam with ash, gravel, coal, and brick inclusions. Embedded in the north wall were two wood planks stretching out in a southeasterly direction. The architectural materials suggest a relation with the destruction of the neighborhood.

Level A_2 was a continuation of level A with 10YR 3/6 dark yellow brown sandy loam. Ash, cinder, and roots were found throughout the level.

Level B was a thin 10YR 4/6 dark yellowish brown loamy sand evenly spread across the unit. Level held few artifacts.

Levels C_1 and C_2 were 10YR 3/4 sandy loams with some continued root disturbance at the surface. Level

averaged 0.6 ft deep and contained artifacts dating to the late 19th century.

Levels D_1 and D_2 were a 10YR 3/6 dark yellowish brown loamy sand. Level was just short of 1.5 ft in thickness and contained a mix of artifacts dating from the 18th and 19th centuries.

Level D_2/E Mix was excavated as the interface between levels D and E. As such this level contained soils from both a 10YR 4/4 dark yellowish brown sandy clay loam and a 5YR 4/6 red sandy loam. This interface was excavated as a 0.4 ft thick transition.

Levels E_2-E_4 was a 5YR 4/4 yellowish red sandy loam with inclusions of small pockets of a 10YR dark yellowish brown clay along the south wall. Dug in several arbitrary levels, this stratum measured just over 1 foot thick. Artifact density was very low but suggests an 18th (possible 17th) century date for this level. Level E_4 was found to be sterile of cultural deposits.

Level F was excavated only in the north half of the unit. Soils were identified as 10YR 4/6 dark yellowish brown sandy clay. Just over 0.3 ft thick, this level contained no artifacts.

Level G was identified at the base of level F but was not excavated. Level was described as a 10YR 5/4 yellowish brown clay loam. As the last few levels have been natural and free of cultural material, excavation was halted.

Feature 51 was a soil stain attributed to root disturbance within level C. Soils were a 10YR 3/3 dark brown sandy loam and were only a few tenths of a foot thick.

Feature 52 and 53 were a post mold and associated hole found at the surface of level D. The mold was a 7.5YR 3/3 dark brown sandy loam. The associated hole was a 10YR 4/4 dark yellowish brown sandy loam and proved to be only 0.33 ft deep.

Unit 17 (119 E275)

Unit was located within the 30'x 30' area opened as Unit 8. The asphalt and the associated bed, therefore were removed prior to beginning excavations on this unit.

Level A was a 7.5YR 4/4 dark brown sandy loam located below the gravel bedding associated with the asphalt parking surface. This 0.6 ft thick level contained a variety of artifacts (including an 1887 nickel) but clearly dated to the 20th century. Level is the same as first levels of Units 11, 12 and 13 as is also related to the destruction of the neighborhood.

Level B was a 0.8 ft thick level comprised of a 10YR 4/3 dark brown sandy loam. Artifacts recovered suggest a late 19th to turn of the century date for this level.

Level C was a 10YR 4/4 dark yellowish brown clay loam. Measuring about 1.5 ft thick, this level contained materials dating to the late 19th century.

Level D was described as a 5YR 4/4 dark yellowish brown sandy loam. Averaging 0.6 ft in depth, this level matched associated levels from adjacent units 12 and 13. Artifact numbers diminished, but those recovered suggest a mix of 18th- and 19th-century materials.

Levels E_1 and E_2 were both a 5YR yellowish red sandy loam. Artifacts diminished and dating is difficult. This red sand has related to late 17th- through early 18th-century deposits elsewhere on the site and is likely a similar deposit.

Feature 77 was a post recorded in the unit profile. Feature was 0.9 ft deep and was associated with the top of level C.

Trench 7 North Wall Profile

Asphalt parking surface measured 28.1 ft AMSL at the higher west end of the trench. The surface of the east end was 27.5 ft AMSL.

Level A was a 10YR 7/1 light gray deposit of gravel. Level was ca. 1 ft thick and served as the bedding for the asphalt parking surface.

Level B was only a thin lens of 10YR 3/6 dark yellowish brown sand.

Level C was a 2.5Y 4/3 olive brown sandy loam. Level averaged 0.6 ft thick and appeared very mixed.

Level D averaged between 1 and 1 1/2 ft thick. Stratum was thickest (measuring nearly 2 ft) at the eastern extent of the trench suggesting a leveling of the ground surface with this deposit. Evidence of a gradual deposition became clear as the profile dried. After a 24 hour exposure, striations became visible within the defined level. These striations created a steeper angle than that created by the levels surface, again suggesting a gradual leveling of the slope in this part of the site.

Level E was a 10YR 3/6 dark yellowish brown mottled with a 10YR 4/6 dark yellowish brown sandy loam. This level measured 0.6 ft thick.

Level F was a 7.5YR 4/6 strong brown sand. Only 0.4 ft of this level was excavated.

Trench 7 South Wall Profile

Asphalt surface measured 28.0 ft AMSL at the west end of the trench and 27.5 ft AMSL at the east end.

Level A was comprised of small sized gravel that was described as a 10YR 7/1 light gray. This foot thick gravel deposit can be associated with the asphalt parking surface installed in the late 1960s.

Level B was identified as a 10YR 3/3 dark brown sandy loam with inclusions of brick fragments. This level was about 0.8 ft deep across the length of the trench and is probably related to the neighborhood destruction.

Level C was found only in the eastern half of the south profile. A 10YR 5/6 yellowish brown sandy clay loam mottled with a 7.5YR 4/6 strong brown sandy loam, level C was nearly 0.8 ft thick at the east edge of the profile but had "wedged out" at the center of the trench.

Level D was described as a 10YR 5/4 yellowish brown soil mottled with a 10YR 4/4 dark yellowish brown sandy loam. This level averaged 0.7 ft thick and showed an clear slope toward the east (similar

to level D in the North Wall Profile).

Level E was present only west of Feature 27 (see below) and was described as a 10YR 4/4 dark yellowish brown sandy loam. At its thickest, this level measured 0.5 ft, but wedged out toward the west.

Level F had a similar appearance to level D (above). It was a 10YR 5/4 yellowish brown soil mottled with a 10YR 4/4 dark yellowish brown sandy loam. It averaged about 0.5 ft thick.

Level G was a 10YR 4/4 dark yellowish brown sandy loam. This level averaged about 0.4 ft thick and clearly sloped downward toward the east.

Level H was a 10YR 4/4 dark yellowish brown mottled with a 5YR 5/6 yellowish brown sandy loam. Level measured about 1 ft thick and also sloped toward the east. Like level D in the North Profile, striations became visible after a period of exposure. These striations created a steeper angle than that created by the levels surface, again suggesting a gradual leveling of the slope in this part of the site.

Level I was a 5YR 4/6 yellowish red sandy loam. This was a clean strata and appears to be natural. About 0.5 ft was exposed in digging the trench.

Feature 27 was a post hole bisected by the backhoe. The 0.8 ft wide stain extended into level A but clearly cut the surface of level B (at 26.7 ft AMSL). The bottom of the feature intruded into the top of H to 24.8 ft AMSL. Levels D-G appear to have been affected by this feature.

Feature 28 was a concentration of gravel noticed at the surface of level I (24.1 ft AMSL). Feature measured 0.8 ft across its surface and was only 0.4 ft deep.

Trench 9 North Wall Profile

Asphalt surface measured 26.1 ft AMSL at the western edge of the trench (the highest point) and 25.6 ft AMSL at the eastern edge.
Level A was a 10YR 7/1 light gray deposit of modern gravel. This level, measuring about 1 ft deep, served as a bedding for the asphalt parking surface placed by the County in the late 1960s.

Level B was a 0.5 ft thick deposit of 10YR 5/6 yellowish brown sand. This also appears to have been associated with a leveling off of the area for the parking surface. This sand was also found in the southern third of Unit 8 (see above).

Level C was described as a 10YR 4/1 dark gray sandy silt loam with coal, brick, and shell inclusions. The level was 0.5 ft deep.

Level D was a composite of multiple layers of coal ash and sand. This series of deposits was about 0.5 ft thick and was identified as a 10YR 4/1 dark gray.

Level E was a more solid deposit of ash and coal measuring ca. 0.3 ft thick.

Level F was a 10YR 3/4 dark yellowish brown clay loam. Level was only 0.2 ft thick and was likely an interface between levels E (above) and G (below).

Level G was a 10YR 3/4 dark yellowish brown clay loam. Level was excavated to a depth of 1.1 ft.

Trench 9 South Wall Profile

Asphalt surface measured 26.1 ft AMSL at the western edge of the trench (the highest point) and 25.4 ft AMSL at the eastern edge.

Level A was a 10YR 7/1 light gray deposit of modern gravel. This level, measuring about 1 ft deep, served as a bedding for the asphalt parking surface.

Level B was a 10YR 5/6 yellowish brown sand with fragments of plywood. This deposit is also related to the above asphalt surface.

Level C was a 10YR 4/1 dark gray sandy silt loam with coal, brick and shell inclusions. Level was about 0.5 ft thick.

Level D was a composite of multiple layers of coal ash and sand. This series of deposits was about 0.5 ft thick and was identified as a 10YR 4/1 dark gray.

Level E was a distinct 0.2 ft layer of ash and coal.

Level F was a 10YR 4/6 dark yellowish brown sandy clay loam. Level was between 0.2 and 0.3 ft thick.

Level G was a deposit of ash and coal measuring 0.2 ft thick and sandwiched between levels F (above) and H (below). This level was limited to the west side of the trench.

Level H was another 10YR 4/6 dark yellowish brown sandy clay loam.

Level I was another deposit of ash and coal located in the eastern end of the trench. This 0.2 ft thick deposit clearly sat above level J.

Level J was described as a 10YR 3/4 dark yellowish brown clay loam found in the last foot of excavation. Level appeared to be natural strata.

AREA 6

Trench 10 - North Wall Profile

Level A was a 10YR 6/6 brownish yellow and a 10YR 8/2 white sand approximately 1.4 feet thick. This level was used as bedding for the current asphalt parking lot.

Level B was located only at the extreme west end of the profile. It was a 2.5Y 4/4 olive brown loamy sand approximately 0.6 feet thick.

Level C was located towards the west end of the wall. It was approximately 0.35 feet thick and lensed out towards the east beneath Level D. Soil was a 2.5Y 3/3 dark olive brown sandy loam.

Level D extended across almost the entire length of the profile. It was and extremely undulating level of 5Y 3/1 very dark gray sandy loam ranging from 0.1 to 0.7 feet thick.

Level E was a small pocket of 5Y 4/2 olive gray loamy sand located above a depression within Level D. It was approximately 0.35 thick.

Level F was also located within a depression in Level D. It was a 0.6 feet deposit of 2.5Y 4/4 olive brown sandy loam mottled with a 5Y 3/2 dark olive gray loam.

Level G extended from the eastern edge of the wall of the trench and extended about one third of the way across the profile. It was a 2.5Y 4/4 sandy loam mottled with 5Y 4.2 olive gray sandy loam and 5Y 4/1 dark gray sandy loam. This level ranged from approximately 0.3 to 1.3 feet thick.

Level H began at the western edge of the wall but was interrupted at the center of the trench by Feature 30 and then lensed out at about 1 foot before reaching the east wall. Average thickness of this 2.5Y 4/3 olive brown loam level was approximately 0.5 feet.

Level I was a thick deposit of 10YR 5/6 dark yellowish brown loamy sand that was interrupted at the center of the wall by Feature 31, directly beneath Feature 30. It continued at approximately the same thickness (approximately 1.1 feet) until it reached Feature 32. On the east side of Feature 32, Level I thinned out to approximately 0.3 feet.

Level J was a 7.5YR 5/6 strong brown sand at the bottom of the trench. This level was excavated to an approximate depth of 0.6 feet.

Feature 30 was a possible post hole located within Level H. The soil was a 2.5Y 3.2 very dark grayish brown loam. The depth of this feature was 0.9 feet. A bottle fragment marked "Registered" was recovered from this feature.

Feature 31 was designated separately but most likely was a second level associated with Feature 30, a post hole. Soil in this second level was a 2.5YR 4/3 olive brown loamy sand. Depth was approximately 1.2 feet.

Feature 32 was another possible post hole located near the eastern edge of the trench. Soil was a 10YR 4/6 dark yellowish brown sandy loam mottled with a 2.5Y 4/3 olive brown. Depth of this feature was

1.1 feet. Width of the feature was only 0.2 feet. A piece of blue transfer-printed whiteware was recovered from this feature.

Trench 10 - South Wall Profile

Level A was a 10YR 7/6 yellow and a 10YR 8/3 very pale brown sand associated with the current asphalt parking lot surface. Thickness of this level was approximately 1.3 feet.

Level B was approximately 2 feet in depth consisted of several different soil colors, 10YR 3/1 very dark gray loam, 2.5Y 3/3 very dark gray loam with heavier inclusions of brick and charcoal, and a 10YR 3/6 dark yellowish brown sandy clay loam.

Level C was a 2.5YR 4/4 olive brown clayish sand approximately 1.1 feet thick. A kaolin pipe stem fragment was recovered from this level.

Level D was a 7.5YR 4/6 strong brown sand.

Trench 10 - Window 3 - North Wall Profile

Level K (continuing from north wall of trench) was a 10YR 4/6 dark yellowish brown sandy clay approximately 0.7 feet thick.

Level L was 0.65 feet and consisted of a 10YR 5/8 yellowish brown clayish sand.

Level M was a 10YR 5/8 yellowish brown clayish sand with inclusions of iron. It was excavated to a depth of approximately 0.3 feet.

Trench 10 - Window 3 - South Wall Profile

Level K (remaining consistent with letter designation from north wall) was a 10YR 4/6 dark yellowish brown clayish sand. This was the only level visible in the south wall. Total depth was 1.35 feet thick.

Trench 10 - Window 3 - East Wall Profile

Level K ranged from approximately 0.6 to 1.4 feet at the south end and was a 10YR 4/6 dark yellowish brown clayish sand.

Level L was approximately 0.5 feet at the north end and lensed out before reaching the south end. Soil was a 10YR 5/8 yellowish brown clayish sand.

Level M also lensed out from the north to south wall. It was a 10YR 5/8 yellowish brown clayish sand with iron inclusions.

Trench 10 - Window 3 - West Wall Profile

Level K was the 10YR 4/6 dark yellowish brown sandy clay present throughout the window. It ran the full depth of the profile at the north end but was only 0.6 feet at the south end.

Level L was the 10YR 5/8 yellowish brown clayish sand. This level was not fully excavated and depths ranged from 0.1 to 0.7 feet.

AREA 7

Unit 16 (N444 E189)

Level A was the current concrete courtyard present in front of the courthouse. Also included in this level was the gravel bedding associated with the pad. Total depth was approximately 0.78 feet.

Level B was a relatively clean fill level of sand, 10YR 3/4 dark yellowish brown, used as a base for the concrete pad. Depth of this level was approximately 0.6 feet. Twentieth century materials, including brick fragments, redware and whiteware, were collected.

Levels C_1-C_2 were a 10YR 3/3 dark brown sandy silt loam. The first arbitrary level of C was located adjacent to Feature 56, a sand bedding. Total thickness of these levels was approximately 1.2 feet. Artifacts recovered dated to middle to late 19th century and included pipe stem fragments, whiteware, redware and olive green bottle glass.

Levels D_1-D_3 a 10YR 3/4 dark yellowish brown clay loam mottled with a 10YR 4/6 . It was a thick deposit of fill, approximately 1.6 feet, containing 18th century materials including pearlware, tin-glazed earthenware, whiteware, olive green bottle glass and a terra cotta pipe stem fragment.

Feature 56 was a combination of a 10YR 5/8 yellowish brown sand and a 10YR 3/3 dark brown sandy loam. The feature was present across the southern half of the unit and was approximately 0.49 feet thick. It appeared to have been the base to a previous surface. Most likely, it was associated with the original brick surface in front of the courthouse.

Level E was a 10YR 5/6 yellowish brown sandy loam approximately 0.9 feet thick. This level predated the construction of the courthouse. Artifacts recovered included tin-glazed earthenware and a nail found at the surface of this level.

Feature 57 was a firmly packed deposit of brick rubble at the surface of Level D. Soil was a 10YR 3/4 dark yellowish brown sandy loam. This 0.01 thick deposit was most likely construction related.

Feature 58 was a 5YR 4/4 reddish brown soil stain within Level D. This 0.28 thick stain was in fact disintegrated bricks.

Feature 59 was located in the southeast corner of the unit. It was an area of soft, loose 10YR 3/4 sandy loam within Level D.

Feature 72 was found in the west wall of the unit while cleaning for a profile. It was a soil stain, 10YR 3/4 dark yellowish brown, and concentration of rubble. Thickness of this feature was approximately 1.3 feet.

Summary: Alsp part of lot 59 purchased by Charity Folks and left by her to her granddaughter Elizabeth Folks. Elizabeth Folks Smith's heirs sold the property in 1863. Matilda Oger acquired it and the adjoining lot in 1890 and built a house on each lot by 1894; she lived in the house on this lot. Oger and subsequent owners were probably white, but by 1900, the house was rented to African American tenants.

Summary: This is the northernmost of the lots subdivided from the portion of lot 59 that Charity Folks left to her daughter, Harriet Calder. In 1854, Calder transferred the property to her daughter, Mary Offer. For thirty-five years, the house was owned by James Smothers, an African American barber. Smothers and his wife sold the lot in 1897 to A. Owen Iglehart, whose son inherited it following his mother's death c.1905. For 20 years, this was rental property, but in 1919, W. Sellman Hardesty, an assistant pastor at Mt. Moriah, bought the house and lived there until 1968.

Summary: Part of the property left by Folks to Calder and transferred by her to Offer. Offer sold this lot two years after receiving it from her mother. By 1884, there was a two-story frame house on the lot, which was sold in that year to the trustees of Mt. Moriah for use as a parsonage. From that time, the house was occupied by the minister of Mt. Moriah.

1888: #40

Summary: Part of the property left by Folks to Calder and transferred by her to Offer. Offer sold the lot that included both 70 and 72 Franklin two years after receiving it from her mother. By 1888, there was a two and one-half story frame house on the lot. In that year, the property was bought by Rebecca Bishop, granddaughter of William Bishop. Her mother and stepfather, Johanna and Christopher Carpenter, lived in the house; Christopher Carpenter

was a restaurant owner. From 1910 to 1920 the house was occupied by tenants but became an owner-occupied property again in 1920. It remained in the hands of the Johnson family until its sale to the county in 1974.

Summary: One of the five lots subdivided from the estate of Moses Bishop in 1879. Bishop's daughter Rebecca received this lot as part of her share of her father's estate. Bishop and his brother James had acquired the five lots from Mary Offer; they were the last portion of Offer's share of Charity Folks' purchase, acquired by Offer from her mother, Harriet Calder. The lot had a two-story frame house with an attic on it when the property was subdivided. From 1923 to 1957 the house was owned and occupied by Blanche Carpenter. Following its sale to Stuart Christhilf in 1957, it became a rental property.

Summary: The lot inherited by Araminta Johnson from the estate of James C. Bishop; part of the Folks to Calder to Offer property that was sold to James and Moses Bishop. Johnson may have been James Bishop's daughter. At the time of the division of the estate in 1879, the lot had a two-story plus attic frame house on it. For most of the twentieth century, it was owned by Simon Greenfield, a Russian-born tailor, and his son Max.

76 Cathedral Street
1896: 35

Summary: Lot 5 of the division of James and Moses Bishop's property. This portion of their land was acquired by purchase from the trustee appointed to sell the property of George Wells to satisfy his creditors. It is part of lot 58 and of the Dulany to Green to Wells land. This lot went to James C. Bishop and was willed by him to his daughter Constantia Smith. There was a two-story frame house on the land when the division was made in 1879. The

property remained in the hands of Smith and her heirs until 1941. Upon the death of Constantia Smith, her children, Mabel and James, inherited her property and divided it among themselves. Mabel Smith received this lot sometime prior to 1941, when she and her husband sold it. Mabel Smith married Herbert Scurlock, a member of the well-known and prominent family of photographers in Washington, DC. The house was rented for over thirty years in the early twentieth-century by the Bran/mford family. The tenants appear always to have been black.

74 Cathedral Street
1896: 37

Summary: With 72 Cathedral, part of the estate of George Wells purchased by Mary Moss; vacant at the time originally offered for sale in 1878, but with a frame house on each lot by 1899. Remained in the hands of the Moss family until 1943. Owned by Monroe and Helen Gross for 18 years and then by Doctors Aris and Faye Allen for 9 years before the county purchased the property. The Grosses lived here but otherwise a rental property with black tenants.

66 Cathedral Street
1896: 45

Summary: All of land from 66 Cathedral to 52 Cathedral at the corner of South Street had been part of the estate of George Wells and was sold to James Hodge in 1878 by Wells' trustee. All of the Cathedral Street lots were vacant at that time. Hodge may have been black; the next owner, John W. Scott, who held the property for over fifty years, definitely was. In 1954 the property was acquired by Charles Oliver, another of the black aldermen; he and his wife owned it and lived there until 1971. All of the earlier tenants appear to have been black.

64-62 Cathedral Street
1896: 47 and 49

Summary: Almost exclusively a black-owned property following its sale by Hodge to Constantia Vogelsang Smith, one of the heirs of James Bishop. This property remained in the hands of the Smith family until 1942. In 1955 Doctors Aris and Faye Allen purchased it and used the first floor as medical offices while renting three apartments on the second floor. The tenants have always been black, and have included Thomas Arrington Thompson, another of the black alderman as well as a lawyer and principal of Stanton School.

County files:
2-story brick building, medical office on 1st floor and 3 apartments above

Apt. 1: John & Eleanor Blackstone, aged 58 and 55, state engineer at Crownsville, wife works at AA General Hospital

Apt. 2: William & Lillie Parker, age 77 and retired, age 65 on social security

Apt. 3: Ollie & Margaret Snowden and granddaughter, age 12; both retired from USNA, granddaughter at Bates Junior High School

SEE 74 Cathedral: part of JHH293/261

Bellis Court

Summary: A lot along South Street, directly behind the courthouse, part of lot 58. In 1870 Bellis acquired the house that had been his wife's home; described as being "very much out of repair." Assessments continue to show a brick house of substantial value until 1897, when the property has been subdivided and 18 frame houses have been built along South Street and in the interior of the block--Bellis Court.

lot with improvement thereon, adjoining lot on which courthouse stands and now in occupation of William Watt

JHN1/444 1846/1/30 Langston and Company to William Watt

mortgage of lot adjoining courthouse

no being clause

Bed of South Street

SH1/322 1866/3/30 Mayor, etc. to George Wells $200

that portion of South Street now and for many years in the possession of Wells, with right of reopening by refunding the purchase price; heretofore rented by him

South Street

Summary: The South Street lots have not been traced in detail, because the county records do not provide any reasonable means of identifying the properties involved. As most of the archaeological remains must have been destroyed in constructing the 1951 addition and the corner office building, no effort has been made to locate the transfers to the county.

#1 South/ 111

Directory	1928-29	Nelson Simms
Assessments	1923-29	Nelson Simms; then to William Phelps 20 x 85 lot & building
Census	1910	Wilson Simms, black, 50, odd jobs, owner; wife Henrietta, 43; nephew, mulatto, 5

1880-1910 Census Tables

Census Records Key

R	Race
S	Sex
A	Age
REL	Relation to Head of Household
MS	Marital Status
RD	Ability to Read
WR	Ability to Write
O/R	Own or Rent Home

Race:

B	Black
M	Mulatto
W	White

Relation: H = Husband/Head of Household (This designation is interchangable. The 1880 Census omits any designation for the husband. Generally, if a male is not present, the term refers to the female head of the house.)

W	Wife	SS	Step son
S	Son	SD	Step daughter
D	Daughter	N	Nephew/Niece
MOT	Mother	GN	Grandniece
FAT	Father	GD	Grandaughter
BRO	Brother	GS	Grandson
STR	Sister	COU	Cousin
SIL	Son/Sister in law	BD	Boarder
DIL	Daughter in law	LD	Lodger
BIL	Brother in law	HK	Housekeeper
MIL	Mother in law	ADO	Adopted

Marital Status:

M	Married
S	Single
W	Widowed

Occupation:

PR FM	Private Family
AT HM	At Home
BDG HS	Boarding House

1880 Census Records: Annapolis, 3rd Precinct, 6th Election District.

(House numbers on Cathedral St. were ommitted from the 1880 Census document. Although it is possible to say that African Americans were living on this street, it is difficult to say exactly where. Listed below are the names of all of the African Americans who resided on the street but did not have recorded house numbers.)

Appendix C
Public Interpretation Program

PUBLIC INTERPRETATION PROGRAM

Archaeology in Annapolis has designed and run successful programs of site interpretation on its excavations every year since 1982. The Phase III excavations at the Anne Arundel County Courthouse were no exception.

Public interpretation at the Courthouse site involved continued consultation with the staff of the Banneker-Douglass Museum. The museum staff assisted by scheduling school groups and local organizations for tours of the archaeological investigations during length of the excavation. School groups and organizations which toured the site included Glen Burnie Park Elementary; Thomas Claggett Elementary; Matthew Henson Elementary; Lombard Middle School; Walter Reed Army Medical Center; and Frederick Douglass High School. Staff members also directed visitors of Banneker-Douglass Museum to the excavations behind their building.

The site was opened to the public every Friday, from 11:00 AM to 2:00 PM. Members of the field team conducted tours and discussed the site and its implications to all visitors. The archaeologists were instructed by Dr. Mark Leone and George Logan, both of whom are skilled in training archaeologists in public presentations. A large "Archaeology in Annapolis" banner and informational placards were set up on a daily basis. This set of four placards provided passers-by with the details of who was excavating, why it was being done, and what the archival record had revealed concerning the history of the block. Placard themes were:

* Archaeology at the Courthouse
* Early Settlement
* African-American Archaeology
* A Community Remembers

Archaeologist George Logan, met with the Ministers and officials of four local African-American parishes to inform them of the excavations and research being conducted and to distribute fliers inviting the congregation to tour the site. He visited the First Baptist Church on Washington Street; Asbury Methodist on West Street; Phillip's Episcopal Church on Bestgate Road; and Mt. Moriah on Bayridge Road in Eastport. Mr. Logan was invited to address the congregation at a weekly service at Mt. Moriah Church. During the community announcements, he discussed the previous and current archaeological research being done on the site, including the interest in the history of the Mt. Moriah church located on the block. The congregation was invited to tour the site and informed of upcoming community days.

Two Sundays, June 19th and 26th, were scheduled as public/community outreach days. Neighborhood residents, as well as any other interested parties, were invited to come tour the site and share with the archaeologists the knowledge they had concerning the history of the area. Both days were well attended and proved to be a success. Visitors included a previous resident of one of the Bellis Court rowhouses who shared her recollections of the neighborhood with the archaeologists.

Several times during the excavation, field supervisors and directors met with reporters at the site in order to provide accurate and appropriate coverage of the work. Articles appeared in several editions of both The Sun and The Capital.

The public interpretation program at the Courthouse site was undoubtedly a success. More than six hundred visitors took advantage of the opportunity to learn more about the history of the city of Annapolis and toured the site during the thirteen weeks of excavations.

It should be noted that the issue of public education will continue to be addressed; it has not ended with the close of field operations. Archaeology in Annapolis will be working with the staff of the Banneker-Douglass Museum and other interested institutions to develop post-excavation museum displays of artifacts and other materials from the investigations. A table-top exhibit was created for the official groundbreaking ceremony held at the Courthouse on the 21st of October. At the Fifth Annual Anne Arundel Archaeology Conference, held at the Arundel Center on November 19th, Dr. John Seidel presented the preliminary results of the Courthouse excavations to both amateurs and professionals.

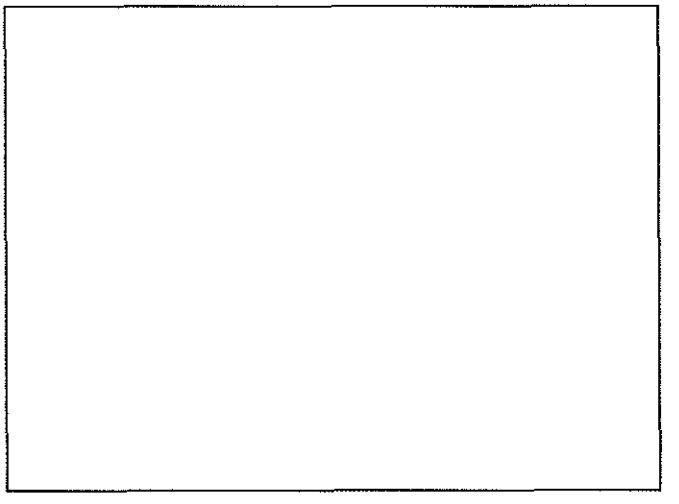
Early Settlement

This land was at the edge of a 19-acre parcel that Lord Baltimore purchased from Richard Acton in 1668. The parcel was expanded to include 100 acres in 1683. It was an official port of entry into the Colony and became known as Arundelton.

This period of Annapolis' history is not well understood. In general, we know that earliest settlement clustered along Spa Creek and Acton's Cove, a short distance from here. People depended on waterways for travel, communication and trade, so it seems logical that they would build their homes and businesses at the water's edge. Anne Arundel County archaeologists and volunteers have recently been documenting and excavating archaeological sites near Annapolis that are threatened by development projects. Based on this work, they can now describe more specifically where people chose to live. In general they built some distance back from the waterfront and closer to springheads, where they had easy access to fresh water.

The map below provides some clues about Annapolis' early settlement, even though it was made during the American Revolution. The mapmaker did not extend South and Franklin Streets beyond their intersections with Church Circle and no structures are shown on this area. It seems obvious, then, that this area was open space during most of the 1600s and 1700s, but examine the Annapolis-side shoreline of Carroll's Creek. The waterfront looks as if it had been much closer to South Street and Church Circle before 1781. Inlets like those shown often indicate fresh water tributaries to the tidal rivers.



Captaine Map of the City of Annapolis, 1781.

In *Atlas of Historical Maps of Maryland, 1608-1908.* Edward C. Papenfuse and Joseph M. Coale III, JHU Press, Baltimore, 1982.

In 1990, we excavated a few five-foot-square units in this part of the lot. In one of them we found pottery dating to the late 1600s, so we are expanding our excavations here this year in hopes of learning more about Annapolis' earliest settlement. We know that we are standing in the vicinity of the 17th-century town. If there was a fresh water source here, then this lot would have a suitable location for a house site.

George Logan
June 1994

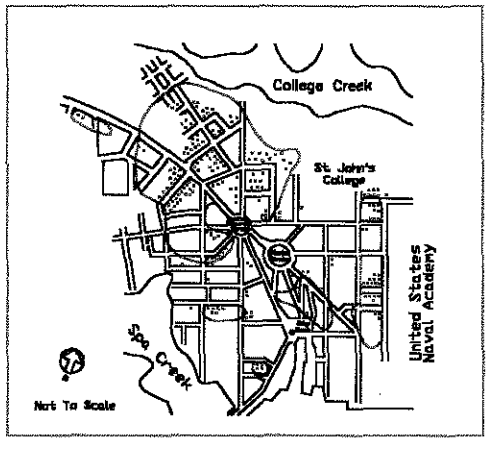
African American Archaeology

Archaeology in Annapolis first excavated here in 1990. It was part of a larger research program aimed at learning more about the city's African-American past through archaeology. People had known a number of important things about African-American history in Annapolis and Maryland before we began those excavations.

African Americans have made up one third of the city's population since the 1700s. In 1850, one quarter of Annapolis' entire free population was African American, and before the Civil War, more free African Americans lived in Maryland than in any other state.

This area we call the Courthouse site was part of a broad-based African American community since at least 1870. The Mount Moriah African Methodist Episcopal (AME) Church was built on Franklin Street in 1874. It is now a National Historic Landmark and serves as both the Banneker-Douglass Museum and the center for the Maryland Commission on Afro-American History and Culture.

William Bishop, a free African American in 1850 and one of the city's wealthiest residents, owned properties along Franklin Street. He was also a trustee for the hospital across Cathedral Street, which is now called the Anne Arundel Medical Center. Through the years other neighborhood residents became business owners, others were skilled professionals, and still others worked for the U.S. Naval Academy, or for other private employers in Annapolis.



African American households and neighborhoods in Annapolis from 1870 through 1885.

Adapted from "Black Community Development in Annapolis, Maryland, 1870-1885," by Sallie M. Ives. In *Geographical Perspectives on Maryland's Past*, eds., R.D. Mitchell and E.K. Muller, Dept. of Geography, Univ. of MD., 1979

Through archaeology we can learn more about the daily lives of people living here over the last 100 years--an economic cross-section of Annapolis African-American population. We hope that with the help of this research, presentations and exhibits of Annapolis' past will include more stories of its African American residents and of their contributions to the larger community.

George Logan
June 1994

A Community Remembers

Archaeology in Annapolis began an oral history research project in 1990 to learn about this neighborhood's recent past and to help the crew decide where to begin excavations. What we learned from those interviews went far beyond our initial questions. Here is a sample of residents' memories of this place.

Most of the houses [were] either cedar shingles or, I think they called it, German siding. Half of the block [of South Street]--upper half--didn't have porches. We had a porch. Some people had swings. Some people screened their porches in. We used to sleep on our porch in the summertime. In those days, it wasn't a big thing.

Norvain Sharps
South Street

In Bellis Court, everybody had their own fenced-off yard. Of course we had our tubs back there. Wash tubs. In the summer, we washed outside. My father had chickens and ducks. He used to have a dog because he would go hunting.

Dorothy Booze
Bellis Court

We made swings out of automobile tires right there on the [hospital] side of South Street where the trucks roll up now. All that was lawn. We made swings and we'd get on these tires and oh, we had a lot of fun.

George Phelps
South Street

In our dining room we had an ice box. [An iceman] came by everyday. There were signs that you put in the window--5 cents, 10 cents, 25 cents--indicating whatever size piece you wanted. He would cut it right there in his wagon and bring it in and put it in our ice box.

Henry Holland
South Street

My great grandmother had some roses and irises and daffodils and lillies of the valley. It was hot in the summertime so we sat on the porch. [It] was big enough to get five rocking chairs. We would sit and people would come by and we would wave. Annapolis was a very friendly town.

Archaeology at the Courthouse

Archaeology in Annapolis is an ongoing research program which has conducted excavations in the city's Historic District for thirteen years. Histroic Annapolis Foundation, Inc., and the University of Maryland, College Park jointly sponsor the program.

* Anne Arundel County is paying for the research as part of the Courthouse expansion project.

* Spillis Candela/Warnecke, an architectural consulting firm in Washington, D.C., is project manager and hired Archaeology in Annapolis to conduct the archaeological research.

* Dr. Al Luckenbach, Anne Arundel County Archaeologist, is the county representative for this phase of the development project.

* Banneker-Douglass Museum is working with the archaeology crew to coordinate site tours and public programs.

Site of the future courthouse yields clues to the city's past

Group studies former black community

By Liz Atwood
Sun Staff Writer

In the parking lot behind the Anne Arundel County Courthouse, men and women are digging beneath the asphalt for treasure. Not gold or silver, but broken bits of pottery, glass and clay that will tell the stories of the people who lived there generations ago.

"This is a large, important site that has been inhabited for 350 years," said Mark Leone, an archaeology professor at the University of Maryland College Park who is a project leader at the site.

The work of his team, which began this week, will be brief. The exploration must be completed by July 15, before the site is lost beneath a new, $43 million courthouse.

Annapolis' Historic District Commission required the dig as part of its approval earlier this year of the courthouse project. The site will be open to tours and visitors later this month, Mr. Leone said.

Mr. Leone's group, Archaeology in Annapolis, already is familiar with the site, having dug there in 1990. At that time the site yielded rare pottery from the Colonial period and artifacts from a diverse black community that lived there in the late 19th and early 20th centuries.

The bits of glass, lead pencils, buttons and animal bones unearthed four years ago are believed to be just a fragment of the wealth that lies beneath the parking lot, Mr. Leone said.

"It's a wonderful opportunity to explore African-American history, the middle class and lower-income residents," he said.

Mr. Leone added that this investigation will be more comprehensive than the last. Workers will dig up to 20 pits going to depths as low as 7 feet.

From past research and written records, the archaeologists know that in the 18th century the site lay at the town's edge and was in the city's original plan, but they do not know how it was used.

They know that the neighborhood was racially integrated in the 19th century, and that by the early 20th century the residents were all black.

The archaeologists are hoping to learn more details about the store operated in that neighborhood by Wiley H. Bates, a prominent black educator, and about the nearby Mount Moriah A.M.E. Church and its parsonages.

The church at 84 Franklin St., now the Banneker-Douglass Museum, was the home of the first free black congregation in Maryland.

Some black residents of Annapolis still remember the community that was bordered by Franklin, Cathedral, Charles and Duke of Gloucester streets.

"It was a beautiful area to live in," said Alderman Samuel Gilmer, a Ward 3 Democrat who lived there for a number of years.

He remembers his father, a street peddler, selling produce to the residents in the 1930s and 1940s.

"I think it's important to do a study of the area and try to understand how the black folks lived," Mr. Gilmer said.

Dr. Ronald L. Sharps, director of the the Banneker-Douglas Museum, said the archaeological expedition will go beyond the memories of the living residents to uncover facts they may not have known or had forgotten. He hopes to assemble the artifacts gleaned from the site into an exhibition at the museum.

"What we hope to achieve is a greater sense of the development of

Digging up area's history

Soil sleuths uncover 'buried treasure' behind courthouse

By DEBORAH FUNK
Staff Writer

Centuries-old trash beneath the county courthouse parking lot is buried treasure to archaeologists and historians.

There, beneath the asphalt and soil, lie clues to Annapolis past.

For the last five weeks, a team from Archaeology in Annapolis armed with computer-generated maps, a backhoe, shovels and buckets has dug through the blacktop and uncovered a window to what once was.

"It's kind of interesting because we're getting a lot of different occupants' trash here," said John Seidel, co-director of the project and an anthropology professor at the University of Maryland.

They've found broken glass and pottery, shells, bones and pipe bowls. Bricks were unearthed, and recently so was a cornerstone.

At one spot, pins, needles and buttons were uncovered. Check the map and the spot appears to be where William Bellis, the tailor, lived back in 1878.

Several yards away, a line of brick was unearthed. Workers think it could be the back edge of a dwelling on Bellis Court, a group of six row houses that sat in the interior of the community.

Together the materials help to shape the stories of life between South Street and what was then Doctor Street, and perhaps life on Bellis Court as well.

"I think it's important to Maryland and also to the nation and the world to be able to look back and see how a culture has developed," said Laurence Hurst, exhibition specialist for the Banneker-Douglass Museum.

Archaeology in Annapolis is sponsored jointly by the Historic Annapolis Foundation and the University of Maryland. The Banneker-Douglass Museum, which borders the site, also jointly sponsors tours of the dig and public programs.

The dig, which is expected to continue into mid-July, is required as part of the courthouse expansion. Workers are digging in selected spots within an area the size of a city block.

It has already sparked excitement among visitors.

A group of sixth-graders visiting the museum this week showed interest in hearing about its history, built as Mount Moriah Church in 1874.

But seeing the dig really piqued their curiosity.

"With digs you have association with history because you see the layers," museum curator Dayna Taylor said.

In the 19th century, the area was integrated with blacks and whites. Around the turn of the century, some whites remained but many rented rooms from blacks, said Mark Leone, a University of Maryland anthropology professor who directs Archaeology in Annapolis.

Examination of the materials helps shed light on the differences of cultures of black and white households.

Blacks relied more on the Chesapeake Bay's stock. The food they did purchase tended to be more national brands whose prices and contents were guaranteed. Their practices were most like a way to avoid racism at local markets, Mr. Leone said.

They also appeared to use patent medicines more frequently than did whites, perhaps indicating the latter had more access to doctors, Mr. Leone said.

"What we're looking at are the archaeological remains of what people could and couldn't get ahold of," Mr. Leone said.

Banneker-Douglass officials wanted to know more about the neighborhood and men like William Bishop and Wiley Bates.

Above, Hannah Jopling sifts through some heavy clay for traces of artifacts at the archaeolog dig behind the county courthouse. The soil, which came from the bottom of deep holes, won' through sifters. Pictured below are some of the pottery and pipes uncovered in the dig, whic required as part of the expansion of the courthouse.

> "I think it's important to Maryland and also to the nation and the world to be able to look back and see how a culture has developed."
> — *Laurence Hurst, exhibition specialist*

DIG

(Continued from Page A1)

Mr. Bishop, a free black and one of the county's wealthier residents, owned property there. Site workers believe Mr. Bates' store was at South and Cathedral streets, now perhaps under the Register of Wills and Office of the State's Attorney, Mr. Seidel said.

Mr. Hurst said people are excited about the dig. Materials uncovered can spark stories, show how value systems developed and even encourage people to look at their own lives.

"It makes people participate in a culture in ways they would not normally do," Mr. Hurst said.

"They see themselves as a part of it and they can contribute by telling oral histories," he said.

"It would be a significant contribution to the African-American race if more people went into that field as a way to bring about new information about our culture," Mr. Hurst said.

Guided tours of the site are available Fridays from 10 a.m. to 2 p.m. through July 8.

Clues to past surface from parking lot

Archaeologists dig behind courthouse

By Dana Hedgpeth
Sun Staff Writer

Beneath the asphalt parking lot behind the Anne Arundel County Courthouse, archaeologists have found the stem of a terra cotta pipe they believe is from the 17th century and foundation bricks from a row-house that may have belonged to the Dulaneys, a loyalist family during the Revolution.

They've come upon bits of metal, glass and pottery as they work to piece together pictures of Annapolis from the 17th century to later years before construction of a new, $43 million courthouse begins on the site in August.

The team running the dig, Archaeology in Annapolis, will work in the lot until July 15 as part of an agreement between the Annapolis Historic District Commission and the county to recover historical artifacts from the site.

"We started out to find the elements of every group who had lived here from the 17th century until today and we are still turning up new discoveries," said Mark Leone, an archaeology professor at the University of Maryland College Park who is the project leader.

One day last week, Chris Sperling-Gonzalez dug around a rusted 20th-century drain pipe of an outdoor toilet with a hand shovel.

"It's like being a private detective who's working in the past," he said as he held up a piece of pottery. "You have to derive all the clues and pay attention to each one.

"By themselves they might mean very little to you at first, but when you look at all the pieces together it can tell you a lot."

Mr. Sperling-Gonzalez is one of seven people working on the project.

"We are coming up with boxes full of artifacts here," said Eric Larsen, the site supervisor. "We are looking at household trash items basically that you would find in someone's backyard, but it gives us a lot to explore the neighborhood to learn as much as we can."

Most of the archaeologists dug in the area in 1990 and found rare pottery from the Colonial period and artifacts from late-19th and early-20th century black communities.

Broken dishes, rusted nails, broken bits of plates and glass are among the artifacts the archaeologists have recovered in the past two months. Liz Aiello, assistant site supervisor, said that all artifacts will be analyzed at the Maritime Museum in Annapolis, then displayed at the Banneker-Douglas Museum on Franklin Street.

"We were initially finding bricks and large glass bottles, but now we are finding bones from meals, marbles and pieces of porcelain," said Hannah Jopling, as she held up a piece of a porcelain doll's eyebrow, probably from the 19th century. "You can just imagine children playing outside in the backyards with marbles and their dolls and woman canning with glass jars.

"It makes you just stop and think about something else and it really gives you an image of the people who lived here centuries ago."

The site lay at the town's edge in the 18th century, according to Mr. Leone. From written, oral and map records, the archaeologists know that the area was a field in the 18th century, then developed into an int grated neighborhood in the 19th ce tury. At the turn of the 20th centur mostly black residents lived Franklin Street.

Tours of the area are available Fr days from 10 a.m. to 2 p.m.

Dig at Annapolis courthouse site finds earliest traces of settlement

By Carol L. Bowers
Sun Staff Writer

Annapolis is getting a special present to celebrate its 300th birthday: a peek at its beginnings.

Traces of a cellar and blacksmith's forge, unearthed last week by archaeologists in the Anne Arundel County Courthouse parking lot, mark the earliest signs ever found of the tiny hamlet that became Maryland's state capital.

"I think there's always been somewhat of a mystery as to where did Annapolis start, and when did it start," said Donna Ware, chairwoman of the Annapolis Historical District Commission, and the county's architectural historian. "What we found was beyond our expectations."

Excavating the site was one condition the Annapolis Historic District Commission imposed before granting approval for development of the site, earmarked for a new county courthouse.

"When you build something that massive and disturb that much ground, we were very interested in getting all the information we could because we knew it would be our last look at this little corner," Ms. Ware said. "This is a major contribution to the archaeological information about the city."

The cellar that is causing so much excitement is believed to have been part of a house built between 1660 and 1710 in what was known then as Anne-Arundel Towne or Arundelton.

The village, really a handful of houses, took shape in 1666 when deeds show Lord Baltimore purchased 19 acres that extended from Acton Cove to the Church Circle, where the courthouse and parking lot are located.

Arundelton was chosen as the site of the new state capital in 1694. A year later the name was changed to Annapolis, in honor of Queen Mary's sister, Princess Anne, and the government's offices were physically moved from St. Mary's City.

"If we're right, this would be the first time any trace of that [earlier] community has ever been found," said Al Luckenbach, Anne Arundel County's staff archaeologist. "And the forge is the earliest evidence of industrial activity here."

Now the archaeologists have the task of determining if they have found Anne Arundel Towne or early Annapolis.

"This stuff predates anything else we've found on 30 other sites," said John Seidel, a University of Maryland archaeologist directing the dig. "What we clearly have are 1690s artifacts, so that would have been about the time of the founding of what we know as Annapolis."

Pinning down the date is difficult, Dr. Seidel said, because the artifacts found on the site have become intermingled over three centuries.

"We have found some items from the 1660s, but none are in pure context," he said.

So far, broken plates, broken bottles, nails, a hand-held brass scale, and pipe stems have been found.

The remains of the forge — brick rubble, slag and waste products from a blacksmith's operation — are a little downhill from the cellar.

"One of the people who lived here was a tailor, and we found a button from a Civil War military

DIG: Traces of early days uncovered

From Page 1B

uniform," Dr. Luckenbach said. "We've found a tremendous amount of things. They'll be analyzing this stuff for months."

The cellar is believed to be part of a house owned by Joseph Hill and listed along with a lot on a bill of sale dated 1711. Dr. Luckenbach said they believe that the house was probably built at least by 1690, possibly earlier.

The archaeologists have only until tomorrow to gather enough evidence to find out for sure, because a "two-week" extension granted by county officials for the dig comes to an end then.

"Any further delay might disrupt the timetable for the new courthouse," Gordon Johnson, project manager for the courthouse, said today. "We think it's big news, and it's just coincidental that it's the 300th anniversary of the city becoming the state capital," said Dr. Seidel of the celebration that will start in September and run through next year.

"We knew there was a potential for 300 years worth of activity, but that historic potential was tempered by the fact that there had been a lot of building and destruction," as they demolished houses in the neighborhood to put up parking lots and expanded the courthouse in the 1940s and 1950s, Dr. Seidel said. "I still

Among the finds at the site are pieces of earthenware.

by Friday."

The artifacts will be stored at the Maryland Historical Trust, the state's preservation agency, he said. Some items might be on display this fall, and a permanent exhibit is being considered for the new courthouse.

"When I first stood on that site and looked at the pavement and where we'd marked off the old lines, and where the fuel tanks were, I never dreamed we'd find that kind of wealth under there," he said. "It's really amazing.

The Courthouse Exhibit, Fall 1994

By Jeff Leone

The Courthouse exhibit was created as a "tabletop" project to be seen at the groundbreaking of the new Courthouse building. My involvement in it began when I approached Liz Aiello in September of 1994. The hope of the original plan for the exhibit was to show each chronological period of the site with an explanatory text, a map and some artifacts to the fullest picture of each period. These chronological periods consisted of the following: 1634-1750, the Settlement Period; 1750-1815, Rural Agrarian Intensification & Town Development; 1815-1870, Agricultural-Industrial Transition and Economic Adaptation; 1870-1930, Industrial/Urban Dominance; 1930-present, the Modern Period. Maps which were to be used in the exhibit consisted of the Stoddert Plan, the Hopkins Atlas, the planned expansion of the courthouse, and the Sanborn Fire Insurance Maps.

During the execution of the exhibit design it was decided that the original plan of detailed periods would have to be scratched. Reasons for this were varied. On e of the main problems was the fact that artifact analysis had just been started and at this point provided little information. A range of interesting artifacts were pulled instead and placed in the lower half of the table representing the range of artifacts found at the site. These were juxtaposed with mounted maps and photographs. These photos consisted of several aerial views of the site as well as field excavations.

The final form of the exhibit was a display which consisted of maps of the site juxtaposed with photos on the upper half of the table with explanatory captions while artifacts found at the site were scattered along the lower half of the table with a rang of dates for each artifact. These artifacts included the following: yellow ware, a bisque doll, and insignia ring, buttons, marbles, a door knob, pipe stem/bowl, pearlware, Rockingham, Rhenish blue & grey stoneware, Rhenish brown stoneware, Northern Italian slipware Border Ware, North Devon Sgrafitto, tin-glazed earthenware, and a Rumford Baking Soda bottle. The placards which were used during excavation to give passers-by a brief description of the archaeology being done were placed leaning against the front of the table.

The layout of the exhibit encouraged the viewer to think about what he or she was seeing. The upper half of the table gave the context for the lower half of the table. Each artifact was labeled with an identification of the artifact and dates so that the viewer could easily see the range of time that the site was occupied.

stoneware	undecorated	circa 1850-1900	**4** sherds: American brown salt glazed straight-walled bottle
whiteware	printed	circa 1880-1900	**2** sherds; blue floral similar to vessels in Denker&Denker 143-148
whiteware	printed	1820-1900 (1860)	red; pattern illegible, but may be sherd of Palestine pattern
stoneware	undecorated	no date	**7** sherds; American grey salt glaze
stoneware	undecorated	no date	**4** sherds; American grey salt glaze vessel with round rim and straight walls
hard-paste porcelain	printed with overglaze painting	post-1880	black print with polychrome overglaze; Denker&Denker 143
hard-paste porcelain	overglaze painted with gilding	no date	red paint with gilded lines
hard-paste porcelain	molded	no date	molded brim panels
hard-paste porcelain	undecorated	no date	**2** sherds; base painted red "D.4-/112-"; prob. pattern or decorator
hard-paste porcelain	undecorated	no date	**2** sherds

redware	undecorated	no date	2 sherds; flower pot
redware	undecorated	no date	2 sherds
redware	black glazed	no date	interior glaze only
ironstone	undecorated	1840-1900 (1870)	6 sherds
ironstone	molded	1840-1900 (1870)	4 sherds
whiteware	gilded with molding	1820-1900 (1860)	2 sherds; deep saucer with gilded floral motif
whiteware	undecorated	1820-1900 (1860)	26 sherds
whiteware	molded	1820-1900 (1860)	5 sherds

Appendix E
Glass Analysis Data

Table 1: Sample of Diagnostics Recovered from Feature 65.

Unit	Description
Trench 4	Aqua bottle embossed THE BALTIMORE BREWING CO. Bottle made as a two piece mold with a cup bottom. Colorless mug. Brown strapped flask -- 2 piece mold w/cup bottom. Two POTTER PARLIN baking powder bottle finishes. A complete SUPERLATIVE BAKING POWDER bottle -- 2 piece mold w/cup bottom. Tool finished wide mouth bottle (bead finish). Milk glass lid liner embossed K&T. Base from a Hazel Atlas made HEINZ 57 bottle. A complete conical ink bottle -- 2 piece mold w?cup bottom and double bead finish.
20	SEAGULL BAKING POWDER//THE POTTER PARLIN CO [on base} -- 2 piece mold w/cup bottom and tooled finish. Colorless mug. VASELINE bottle from CHESEBROUGH MFG. CO.

Faunal Analysis Data

UNIT 1

Unit 1.C, Bag 19

11 unid. mammal

Unit 1.F, Bag 25

1 med. mammal long bone
1 unid. mammal

Total: 2 bones

Unit 1.H, Bag 47

1 cow lumbar vert.
1 med. - lg mammal unid.
8 unid. mammal

Total: 10 bones

Unit 1.I, Bag 44

1 turkey radius
2 pig fibula
1 bird tibiotarsus
3 bird long bone
1 bird innominate

Total: 8 bones

Unit 1.J. Bag 43

1 med. mammal ilium
2 med. mammal occipital
8 unid. mammal
1 unid mammal long bone

Total: 12 bones

Unit 1.K, Bag 51

1 pig molar
1 med. mammal navicular
2 med. mammal pett.-temp.
1 med. mammal cranium
1 med. - lg. mammal long bone
2 med. mammal long bone
11 unid. mammal
2 unid.

Total: 21 bones

Unit 1.f4.a, Bag 35

1 tooth root
1 cow femur
1 unid. mammal

Total: 3 bones

Unit 1.f4.b, Bag 37

2 unid. med. - small mammal

TOTAL UNIT 1: 69 BONES

UNIT 2

Unit 2.Gen, Bag 42

1 med. mammal unid

Unit 2.C1, Bag 22

1 med. mammal lumbar vert.
1 med. mammal long bone
1 unid. mammal
1 unid bird long bone

Total: 4 bones

Unit 2.C2, Bag 24

1 rat humerus
1 rat femur
1 sm. - med. mammal rib
6 unid mammal
1 unid.

Total: 10 bones

Unit 2.D, Bag 26

1 pig premolar
2 unid. med. mammal

NON-PRIORITY FAUNAL REMAINS

Tr. 1.C. N. Wall, Bag 6

1 bird long bone
1 unid. mammal

Total: 2 bones

Tr 1.C. Window 1, Bag 14
1 med. mammal rib
3 unid. mammal
1 sm. to med. mammal cranium
1 bird long bone
1 unid.

Total: 7 bones

Tr. 3.Gen, Bag 8

1 large mammal unid
1 unid. mammal
1 oyster shell

Total: 3 bones

Tr. 4.Gen, Bag 4

1 sheep/goat axis
1 pig radius
2 pig femur
1 sheep/goat radius
2 med. mammal long bone
1 med. mammal tibia
1 med. mammal radius
1 med. mammal rib
1 pig fibula
3 cow rib
1 chicken coracoid

Total: 15 bones

Tr. 5.Gen, Bag 5

1 lg. mammal long bone
1 sheep/goat metacarpal

Total: 2 bones

Tr.7, Bag 88

1 cow femur
1 pig humerus

Total: 2 bones

Tr.9.Gen, Bag 90

1 cow sacrum
1 cow ilium
1 pig metapodial
1 unid. mammal

Total: 4 bones

Tr. 10.Gen, Bag 91

3 Pig humerus
1 med. mammal tibia

Total: 4 bones

Tr.10.B, Bag 97

1 med. Mammal unid

Tr.10.B1, Bag 98

1 bird femur
1 poss. bird innominate

Total: 2 bones

Tr.10.F, Bag 101

1 med. mammal rib

Tr.10.f32, Bag 102

1 bird long bone

Tr.10.I, Bag 100

1 bird long bone

ALL TRENCH TOTAL 45 BONES

8 unid. mammal
1 bird long bone
1 unid.

Total: 13 bones

Unit 2.E1, bag 30

2 bird long bone
2 bird radius
2 unid.

Total: 36 bones

Unit 3.B2, Bag 57

1 med. mammal atlas
2 med. mammal long bone
1 med. - sm. mammal rib
5 unid. mammal
1 bird tibiotarsus
1 sm. - med. mammal long bone
1 oyster shell frag.

Total: 11 bones, 1 shell

Unit 3.f20, Bag 65

1 pig femur
1 pig ulna
1 pig fibula
5 unid. mammal

Total: 8 bones

UNIT 3 TOTAL: 65 BONES

UNIT 4

Unit 4.Gen, Bag 52

5 pig femur
1 unid. mammal vert
2 unid. med. - lg. mammal
4 unid. mammal
1 bird tibiotarsus

Total: 13 bones

Unit 4. Gen, Bag 199

1 cow rib
1 med. mammal rib

Total: 2 bones

UNIT 4 TOTAL: 15 BONES

UNIT 5

Unit 5.Gen, Bag 162
1 sm. mammal phalange

Unit 5.B, Bag 154

1 bird long bone

Unit 5.C, Bag 63

1 cow patella
1 sheep/goat innominate
1 med. mammal rib
1 sheep/goat metacarpal
1 pig phalange 1
1 pig lower canine
1 cow lumbar vert.
1 bird radius
1 bird tibiotarsus
2 bird long bone
1 fish dentary
4 unid. fish
1 catfish pectoral spine
2 med. mammal long bone
4 unid. mammal
1 unid.

Total: 24 bones

Unit 5.F, Bag 77

1 cow humerus
1 cow femur
1 pig lower molar 3
1 pig upper canine
1 sheep/goat phalange 2
1 sheep/goat phalange 3
1 pig fibula
3 med. - lg. mammal long bone
1 med. mammal tibia
1 med. mammal frontal
2 med. mammal rib

Appendix G
Staff Qualifications

ERIC L. LARSEN
(December 1994)

Home Address:

4621 Chestnut Ridge, #G
Amherst, NY 14228
(716) 636 5715

Office Address:

Department of Anthropology
University at Buffalo, SUNY
380 MFAC, Ellicot Complex
Buffalo, New York 14261

EDUCATION:

Present	University at Buffalo, SUNY. Department of Anthropology, Ph.D. Program.
1989	The American University. Bachelor of Arts, History and Anthropology. Thesis Topic -- "Redefining Cherokee: Selective Assimilation for Revitalization, 1789-1839."

AREAS OF SPECIALIZATION:

Historical Archaeology, African-American Archaeology, 19th-Century Urban Contexts, Consumer Culture, Archaeological Theory, Public Archaeology, Mid-Atlantic States.

RESEARCH INTERESTS:

1. Nineteenth-Century Historical Archaeology and Social History.
    a. African, European, and Native American Relations.
    b. Medicine.
    c. Gender.

2. Urbanization and Industrialization.

PROFESSIONAL AFFILIATIONS:

- Society for Historical Archaeology.
- Anthropological Society of Washington.
- Archeological Society of Maryland.
- Phi Alpha Theta - History Honors Society.

PROFESSIONAL ACTIVITIES:

- **GLASS ANALYST** (Anne Arundel County Courthouse Project) -- *University of Maryland, College Park*, September-December 1994.

- **SITE SUPERVISOR.** (Anne Arundel County Courthouse Project) -- *University of Maryland, College Park,* April-August 1994.

- **ASSISTANT LAB DIRECTOR** -- *National Park Service, Harpers Ferry, WV,* May 1992-March 1994.

- **ACTING FIELD DIRECTOR** (MARS II Survey) -- *National Park Service, Harpers Ferry, WV,* October-December 1993.

- **ACTING FIELD DIRECTOR** (Virginius Island, West Rowhouse Project) -- *National Park Service, Harpers Ferry, WV,* May-August 1992.

- **ARCHAEOLOGICAL TECHNICIAN** (Field and Lab) -- *National Park Service, Harpers Ferry, WV,* May 1989-April 1992.

- **RECORDS PROCESSOR** -- *Montgomery County Archives (As Consultant for History Associates, Inc., Rockville, MD),* Sept. 1986-May 1989.

- **CREW POSITION** (Field) -- *John Milner Associates Services, Inc., Federal Triangle Project,* Aug. and Sept. 1988.

- **CREW POSITION** -- Intermittent contract work with *Potomac River Archaeological Survey in conjunction with the Dep't. of Anthropology at The American University,* May 1988-May 1989.

- Summer field school student -- *The American University in cooperation with Denver Service Center, National Park Service, Rockville, MD,* June - July 1987.

EXPERIENCE WITH PUBLIC ARCHAEOLOGY:

Archaeology in Annapolis - Conducted a formal public program that "open days" for the Annapolis Courthouse site. Additionally, conducted tours for school groups coordinated with the Banneker-Douglass Museum

Harpers Ferry National Historical Park - A daily aspect of archaeology at Harpers Ferry involves the interpretation of current sites and the history of the town to Park visitors. To this end:

--I coordinated programs within the Archeology Division. This included scheduling and assigning programs as well as coordinating divisional efforts with the Park's Interpretive Division.

--I developed formal programs interpreting archaeology to school and other visiting groups. This included site tours, town tours, as well as a hands on classroom program.

--I researched and provided a report on the building remains found along the now empty Shenandoah River shoreline. This aided the creation of a permanent wayside exhibit.

South Lake Elementary School - A public school teacher, Joseph Andrews, has on several occasions asked me to speak to his students about archaeology. I have developed and tried several programs on his class.

OTHER SKILLS:

Computers

* Formal training and working knowledge of:	Dbase III+ WordPerfect 5.1, and 6.0
* Familiarity with:	AutoCAD Lotus WordStar

Basic Principles of Survey & Mapping

PROFESSIONAL PAPERS:

1995 Alcohol, Medicinal, Food, and Other Glass: Consumption Behaviors in 19th-Century Harpers Ferry. Paper presented at the Society for Historical Archaeology Conference on Historical and Underwater Archaeology, Washington D.C. (January).

1994 "Putting Archeology Into Context: Public Programs at Harpers Ferry National Historical Park." A paper presented for the Middle Atlantic Archaeological Conference, Ocean City, MD (April).

1993 "Mind Your Own Business: Residence/Businesses in 19th-Century Harpers Ferry." A paper, co-authored with Michael T. Lucas, presented at the Society for Historical Archaeology Conference on Historical and Underwater Archaeology, Kansas City, Missouri (January).

"Alcohol and Industrialization in 19th-Century Harpers Ferry." A paper presented for the Middle Atlantic Archaeological Conference, Ocean City, MD (April).

1991 "Health and Medicine in Nineteenth-Century Harpers Ferry." A paper presented at the Society for Historical Archaeology Conference on Historical and Underwater Archaeology, Richmond, Virginia (January).

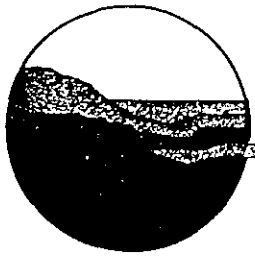
"Engendering Medicine: Multiple Interpretations of 19th-Century Medicine Bottles." A paper presented the Annual Meeting of the Eastern States Archeological Federation, Williamsburg, Virginia (November).

HONORS, AWARDS, AND ACHIEVEMENTS:

--Received Service Award from Harpers Ferry NHP, 1990.
--Graduated with University Honors, The American University, May 1989.
--Elected to Phi Alpha Theta, a history honors society, Jan. 1988.
--Recipient of University's Presidential Scholarship from the American University, Aug. 1984.

Appendix H
Site Survey Forms

MARYLAND ARCHEOLOGICAL SITE SURVEY: BASIC DATA FORM



Maryland Department of Natural Resources
Division of Archeology

Maryland Geological Survey
2300 St. Paul Street
Baltimore, Maryland 21218

Site Number 18 AP63

At time of excavation
May 1994

(Shaded areas are for Division of Archeology use only)

A. Designation

1. County: Anne Arundel

2. Site Number: 18AP63

3. Site Name: The Courthouse Site.

4. Site Type (check all applicable):
   _____ Prehistoric
   XX Historic
   _____ Unknown

5. Maryland Archeological Research Unit Number: Unit 7

B. Location

6. USGS 7.5' Quad-rangle(s): _____
   (Photocopy section of quad(s) on page 4 and mark site location)

7. UTM Coordinates at Center of Site Zone: _____

8. Easting: _____

9. Northing: _____

10. Physiographic Province (check one):
    _____ Allegheny Plateau
    _____ Ridge and Valley
    _____ Great Valley
    _____ Blue Ridge
    _____ Lancaster/Frederick Lowland
    _____ Eastern Piedmont
    XX Western Shore Coastal Plain
    _____ Eastern Shore Coastal Plain

11. Nearest Water Source: Spa Creek

12. 2nd Nearest Water Source: Annapolis Harbor

13. 3rd Nearest Water Source: College Creek

14. 4th Nearest Water Source: _____

BASIC DATA FORM

C. Environmental Data

15. Closest Surface Water Type (check all applicable):

____ Ocean	XX Freshwater Stream/River
XX Estuarine Bay/ Tidal River	____ Freshwater Swamp
____ Tidal or Marsh	____ Lake or Pond
	____ Spring

16. Distance from closest surface water: ____ meters (or 600 feet)

17. SCS Typology:

18. Topographic Settings (check all applicable):

____ Floodplain	____ Hilltop/Bluff
____ Interior Flat	____ Upland Flat
____ Terrace	____ Ridgetop
____ Low Terrace	____ Rockshelter/Cave
____ High Terrace	XX Unknown
____ Hillslope	____ Other:

19. Slope:

20. Elevation: 35 meters (or ____ feet) above sea level

21. Land use at site when last field checked: D
(check all applicable)

____ Plowed/Tilled	____ Extractive
____ No-Till	____ Military
____ Wooded/Forested	____ Recreational
____ Logging/Logged	____ Residential
____ Underbrush/Overgrown	____ Ruin
____ Pasture	____ Standing Structure
____ Cemetery	____ Transportation
____ Commercial	____ Unknown
____ Educational	XX Other: Parking Lot

22. Condition of Site (check all applicable): D

____ UNDISTURBED	DESTROYED	____ UNKNO
	XX minor (0-10%)	
DISTURBED	____ moderate (10-60%)	
____ Plowed	____ major (60-99%)	
____ Eroded	____ total (100%)	
XX Graded/Contoured	____ % unknown	
____ Collected		
____ Vandalized		
____ Dredged		
____ Other:		

23. Additional Comments on Environment:

D. Description

24. Site Type A (check all applicable):

PREHISTORIC
_____ Lithics
_____ Ceramics
_____ Shell Midden
_____ Unknown
_____ Other:
_____

HISTORIC
_____ Cemetery
Domestic:
__XX__ urban
_____ rural
_____ Educational
Industrial:
_____ urban

27. State Plan Themes: _____

28. Site length: _____ meters (or 230 feet)

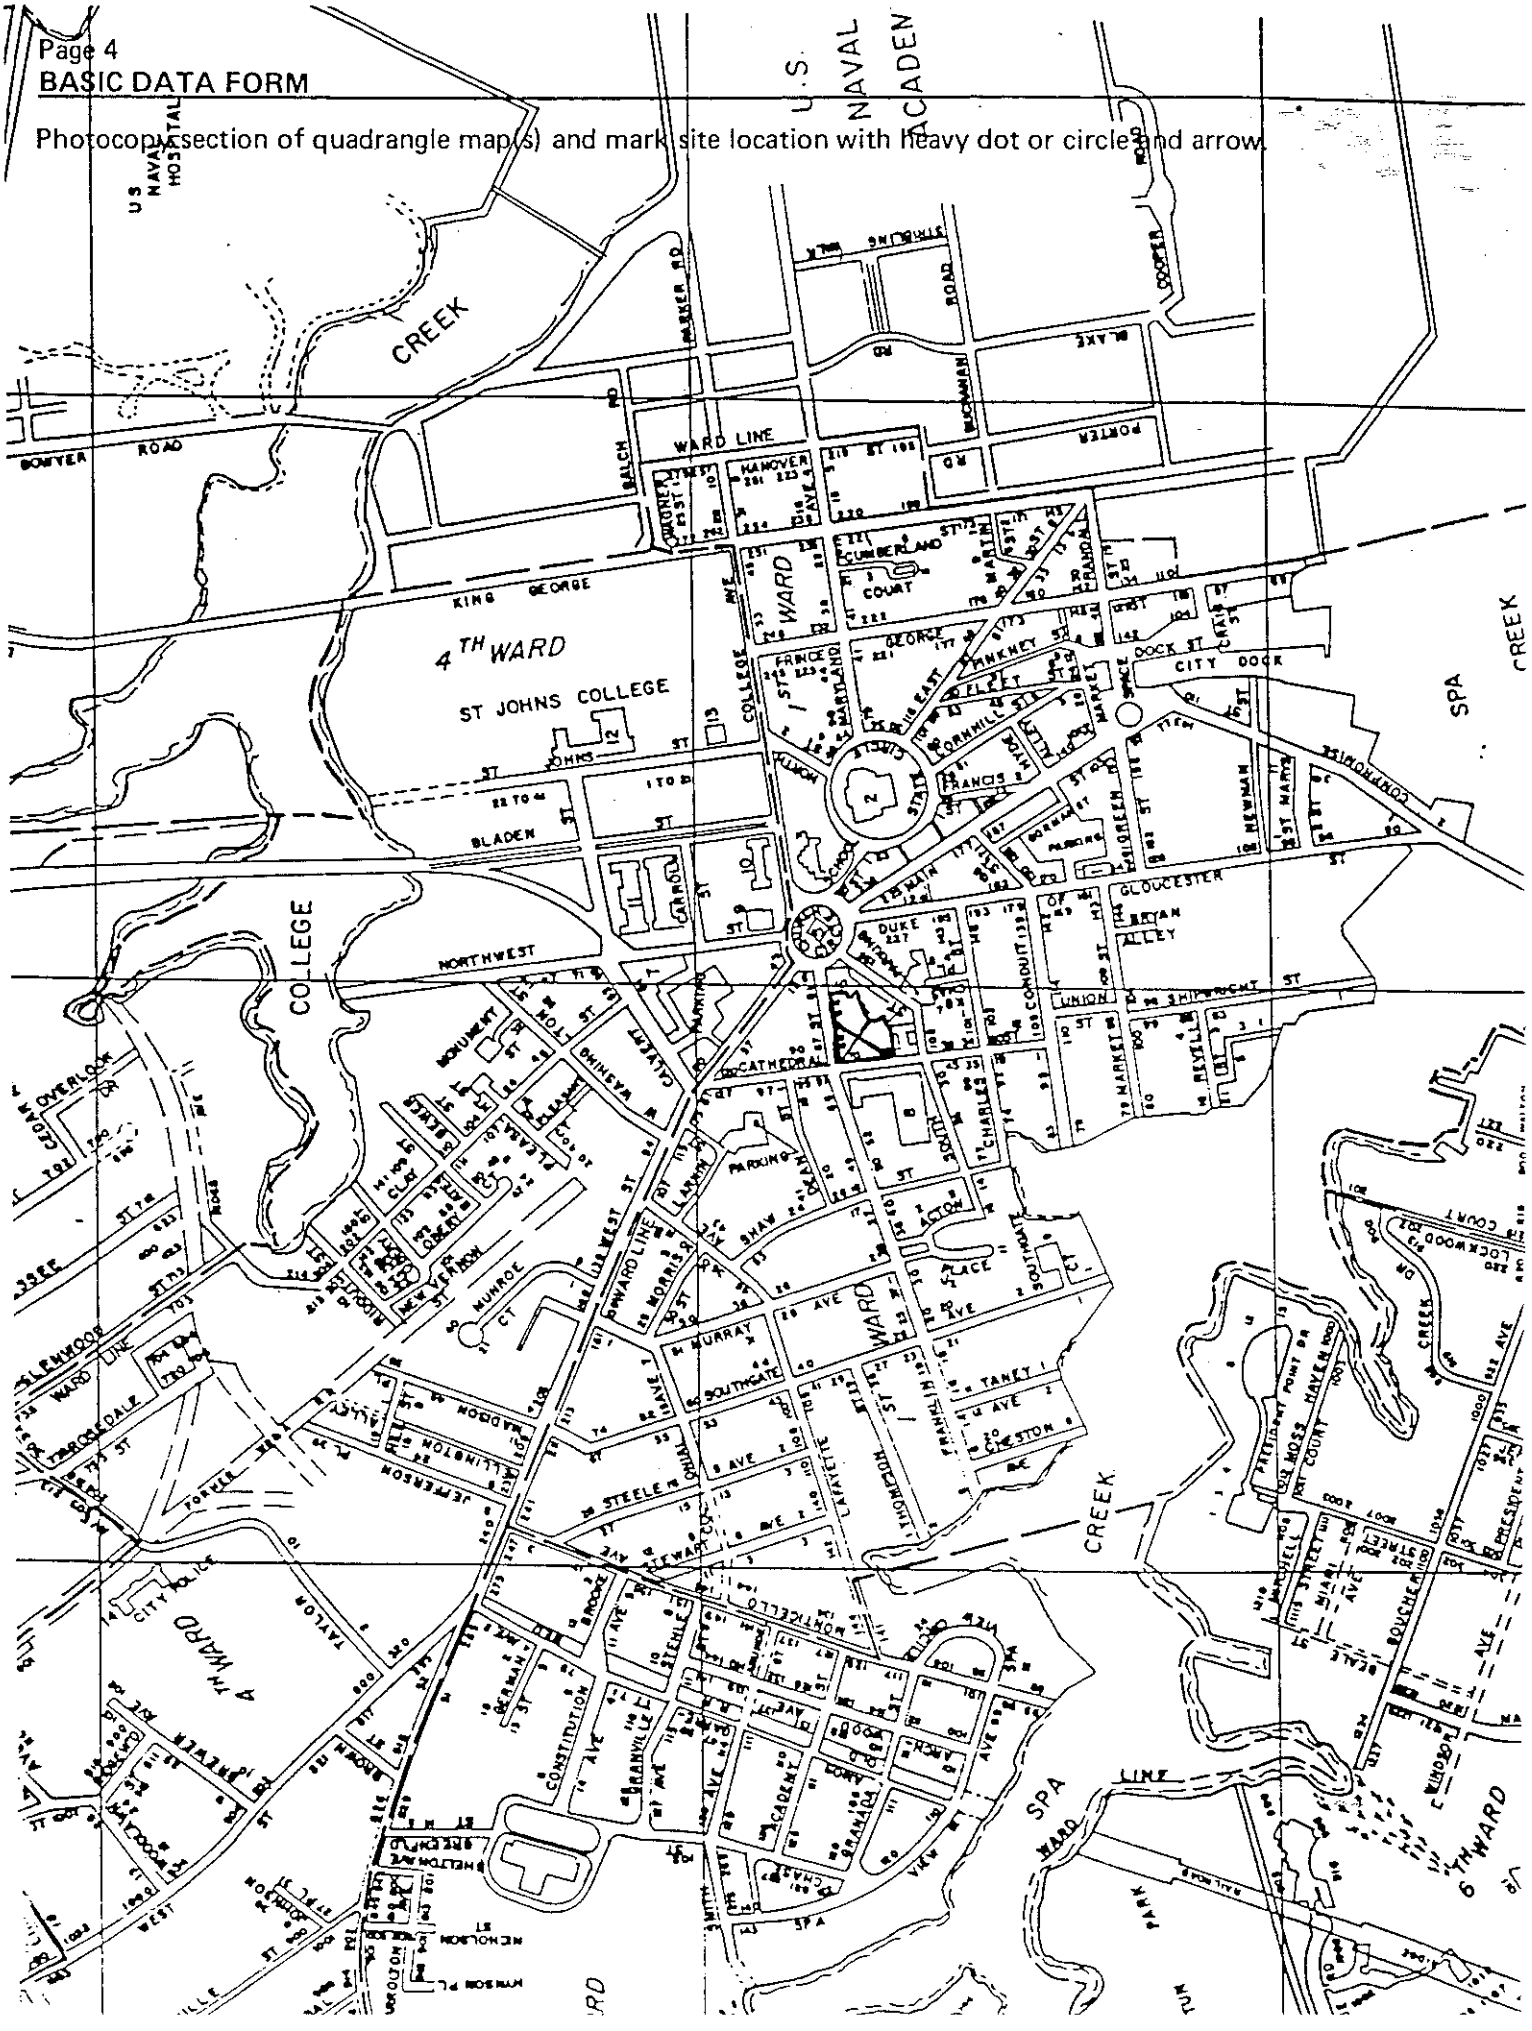
29. Site width: _____ meters (or 185 feet)

30. Is site confined to plowzone?
_____ Yes
_____ No
__XX__ Unknown

31. Does site have subsurface integrity?
__XX__ Yes

BASIC DATA FORM

Photocopy section of quadrangle map(s) and mark site location with heavy dot or circle and arrow.



E. Support Data (Use additional sheets if needed)

32. Accompanying Data Form(s):

_____ Prehistoric
_____ Historic
_____ Submerged
_____ Shipwreck

33. Ownership:

_____ Private
__XX__ Public
_____ Unknown

34. Owner: Anne Arundel County
Address: _____
Phone: _____ Date: _____

35. Tenant: _____
Address: _____
Phone: _____ Date: _____

36. Known Investigations: Ground - Penetrating Radar Testing conducted 4/1/90 by Spencer Smith and Wayne Saunders of ICF Kaiser Engineers 9300 Lee Hwy. Fairfax, VA 22031-1207 #(703) 934-3213

37. Reports (Author & year): Phase I-II Archaeological Investigations on the Courthouse Site (18AP63), An Historic African American Neighborhood in Annapolis, MD Warner & Mullins 1993

38. Other Records?

_____ Yes
__XX__ No
_____ Unknown

39. If YES, type and location: _____

40. Collections?

__x__ Yes
_____ No
_____ Unknown

41. If YES, give owner and location: Contact the Dept. Of Anthropology University of MD College Park

42. Artifact Conservation?

_____ Yes
_____ Partial
_____ No
_____ Unknown

BASIC DATA FORM

43. Maryland Register Status:

_____ Listed on register
_____ Nomination pending
_____ Determined eligible (formal)
_____ Considered eligible (consensus)
_____ Not eligible
